POSTURA

Ergonomics Evaluation Report

Posture Analysis

• Neck Flexion: Red risk

• Shoulder Elevation: Green risk

• Elbow Angle: Red risk

• Wrist Deviation: Yellow risk

• Pelvic Tilt: Red risk

Workstation Analysis

Chair:

– SeatDepth: Green risk

Risk Summary

No risk summary available.

Pain & Risk Summary

Average Pain Level: VAS 7/10

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

• Reduce Neck Flexion

Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin level and look straight ahead to minimize neck strain.

• Correct Elbow Angle

Adjust your arm position so your elbows are bent at approximately 90–110°, keeping your forearms parallel to the floor and close to your body.

• Neutral Wrist Position

Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.

• Neutral Pelvic Position

Sit with your hips and pelvis upright, not tilted forward or backward. Your thighs should be parallel to the floor, and your feet flat on the ground.

• Raise Monitor Height

Elevate your monitor so the top of the screen is at or just below eye level. This will help reduce excessive neck flexion.

• Adjust Chair Height

Ensure your chair height allows your elbows to rest comfortably at a 90–110° angle and your feet to remain flat on the floor.

• Keyboard and Mouse Placement

Position your keyboard and mouse close to your body and at elbow height to maintain neutral wrist and elbow posture.

Final Advice

Your workstation setup is causing significant neck, upper back, and shoulder strain, with severe ISO 9241-5 violations. Prioritize monitor height adjustment and neutral posture to reduce pain and prevent further injury. If pain persists or worsens, consult a healthcare professional.
