

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms (VAS 8)

Posture & Ergonomic Corrections

- Reduce neck flexion to under 5°: Sit upright and adjust your gaze so your neck bends forward less than 5°. This aligns with ISO 9241-5, reducing neck and upper back strain.
- Bend elbows to 90-110° angle: Keep your elbows close to your body and bent at a right angle (90-110°) while typing. This prevents overextension and reduces wrist and upper back stress.
- Keep wrists neutral, under 5° deviation: Position your wrists straight, avoiding side-to-side bending. This minimizes strain on wrists and hands, in line with ISO 9241-5.
- Maintain pelvis tilt under 5°: Sit with your hips level and avoid slouching. Use a lumbar support if needed to keep pelvic tilt minimal.
- Raise laptop screen by 8 cm: Use a laptop riser or stack books to elevate your screen so the top is at eye level, reducing neck flexion to under 5°.
- Move keyboard 10 cm closer: Place your external keyboard closer to your body to allow elbows to rest at 90-110°, preventing overextension.
- Use external mouse at elbow height: Position an external mouse beside your keyboard at the same height to keep wrists straight and shoulders relaxed.

Final Advice

Your current setup poses high ergonomic risks, especially for elbows and wrists, and matches your reported pain. Prioritize raising your laptop, using external input devices, and correcting posture. If tingling or pain worsens, consult a healthcare provider.
