

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms (VAS 8)

Posture & Ergonomic Corrections

- Reduce neck flexion to under 10°: Sit upright and adjust your gaze so your neck bends forward less than 10 degrees. Keep your chin level and avoid looking down at the screen.
- Correct elbow angle to 90–110°: Adjust your arm position so elbows are bent between 90 and 110 degrees, keeping forearms parallel to the floor and close to your body.
- Limit wrist deviation to under 5°: Keep wrists straight while typing or using the mouse. Position hands so wrists are not bent sideways more than 5 degrees.
- Maintain pelvic tilt under 5°: Sit with hips level and back supported, ensuring your pelvis is tilted less than 5 degrees forward or backward.
- Raise laptop screen by 8 cm: Use a stand or stack books to elevate your laptop screen so the top is at or just below eye level, reducing neck flexion.
- Move keyboard 10 cm closer: Position your external keyboard 10 cm closer to the edge of your desk to allow elbows to rest at 90–110 degrees.
- Use external mouse beside keyboard: Place an external mouse directly next to your keyboard to minimize wrist deviation and reduce strain.

Final Advice

Your current posture and workstation setup present significant ergonomic risks, especially to your elbows, wrists, and upper back. Prioritize workstation adjustments and regular exercises to reduce discomfort and prevent further injury. If tingling or pain worsens, consult a healthcare professional.
