

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms (VAS 8)

Posture & Ergonomic Corrections

- Reduce neck flexion to under 10°: Sit upright and adjust your gaze so your neck bends less than 10 degrees forward. Keep your ears aligned over your shoulders to minimize neck strain.
- Correct elbow angle to 90–100°: Adjust your arm position so elbows are bent at a right angle (90–100°), keeping forearms parallel to the floor and close to your body.
- Minimize wrist deviation to under 5°: Keep wrists straight and aligned with forearms while typing or using the mouse. Avoid bending wrists sideways or upwards.
- Maintain pelvic tilt under 5°: Sit with hips level and back supported, ensuring your pelvis is not tilted forward or backward more than 5 degrees.
- Raise laptop screen by 8 cm: Use a laptop riser or stack books to elevate the screen so the top is at eye level, reducing neck flexion.
- Move keyboard 5 cm closer: Position your external keyboard 5 cm closer to the edge of the desk to allow elbows to rest at 90–100° and minimize reaching.
- Use external mouse at elbow height: Place an external mouse next to your keyboard at the same height to keep wrists straight and reduce deviation.

Final Advice

Your assessment shows significant ergonomic risks, especially for elbows, wrists, and neck. Prioritize workstation adjustments and daily exercises. If tingling or pain worsens, consult a healthcare professional.
