

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

### Workstation Analysis

---

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

### Pain & Risk Summary

---

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

### Posture & Ergonomic Corrections

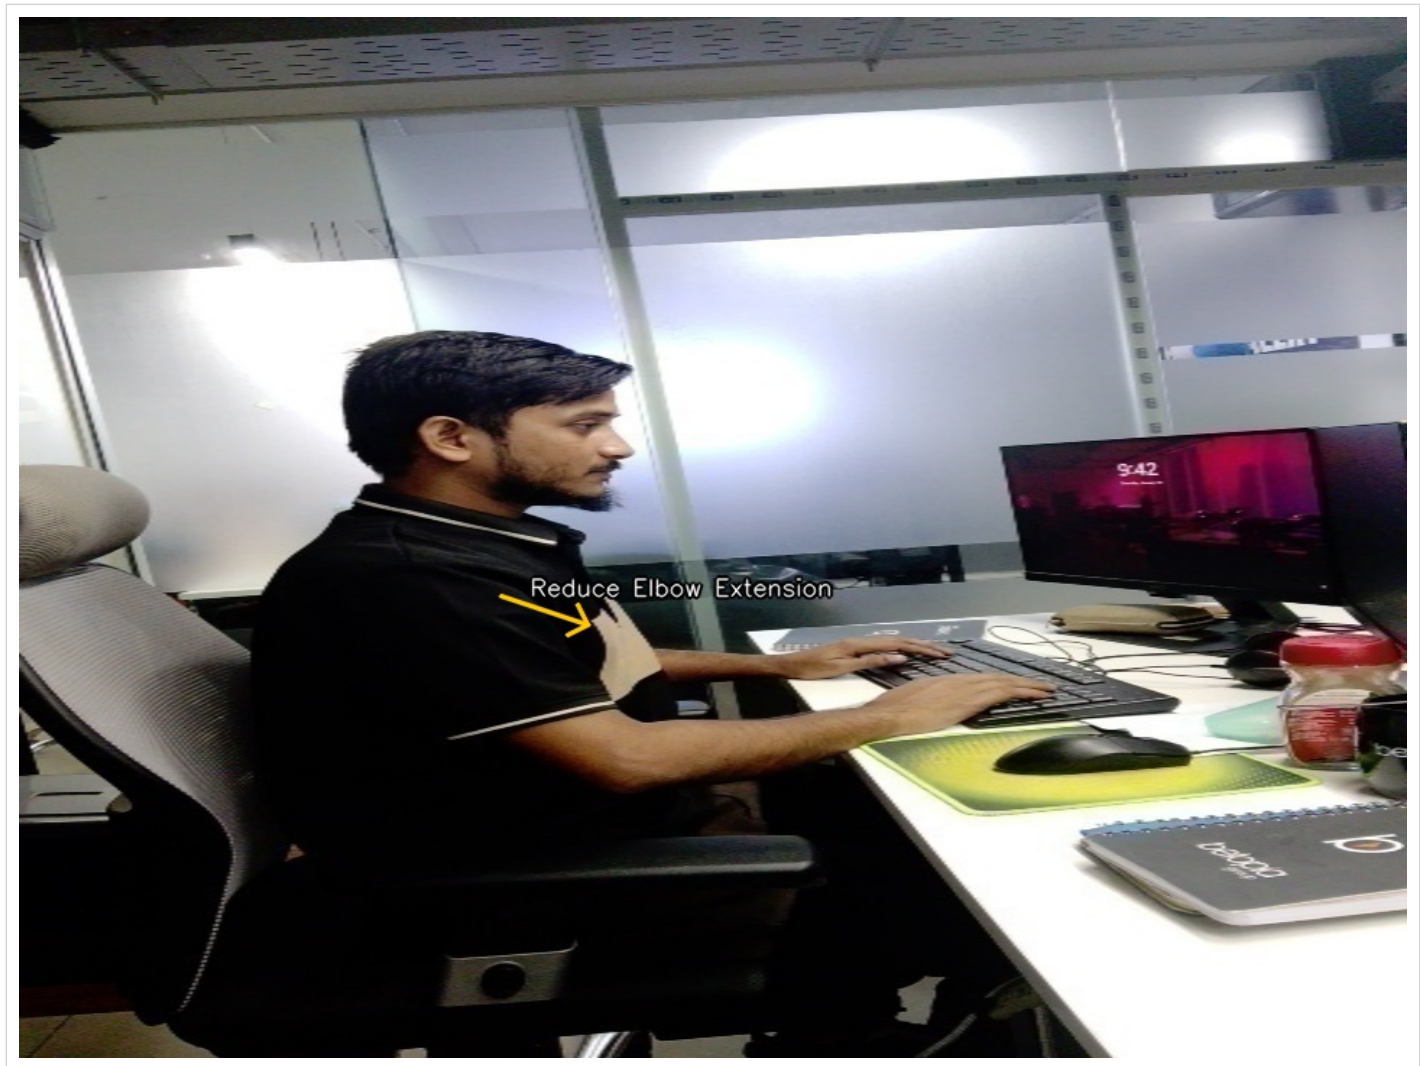

---

- Reduce elbow angle to 100°: Adjust your arm position so that your elbows are bent at approximately 100°, keeping your forearms parallel to the floor and close to your body. This reduces strain on your upper back and shoulders.
- Decrease pelvic tilt to 5°: Sit back fully in your chair with your pelvis upright, aiming for a slight forward tilt of about 5°. Use a lumbar support if needed to maintain this posture and reduce upper back discomfort.
- Lower shoulder elevation below 5°: Relax your shoulders and adjust armrests or desk height so your shoulders remain low and relaxed, minimizing elevation to under 5° to decrease shoulder and upper back strain.
- Raise monitor by 25 cm: Increase your monitor height by 25 cm so the top of the screen is at or just below eye level. This will help maintain a neutral neck posture and reduce neck and upper back pain.

### Final Advice

---

Your assessment shows high ergonomic risk, especially for your upper back and shoulders. Immediate workstation and posture adjustments are critical. If pain persists or worsens, consult a healthcare professional.
