

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce wrist deviation to under 10°: Adjust your wrist position so that it remains as straight as possible while typing or using the mouse. Aim for less than 10° deviation to minimize strain and comply with ISO 9241-5.
- Lower elbow angle to 100°: Bring your chair closer and lower your armrests so your elbows are bent at approximately 100°, keeping your forearms parallel to the desk surface.
- Decrease pelvic tilt to under 10°: Sit with your hips fully back in the chair and use a lumbar support cushion to maintain a neutral pelvic position, reducing tilt to less than 10°.
- Raise monitor by 25 cm: Increase your monitor height by 25 cm so the top of the screen is at or just below eye level, reducing neck flexion and upper back strain.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back, wrists, and lower back. Immediate workstation adjustments and targeted exercises are recommended. If pain persists or worsens, consult a healthcare professional.
