

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms (VAS 8)

Posture & Ergonomic Corrections

- Reduce neck flexion to under 10°: Sit upright and adjust your gaze so your neck bends less than 10°. Keep ears aligned over shoulders to minimize forward head posture.
- Bend elbows to 90–100° angle: Relax your arms and bring your elbows closer to your body, forming a right angle (90–100°) at the elbow joint while typing.
- Keep wrists straight, limit to 5° deviation: Position your wrists so they remain straight and in line with your forearms, avoiding any sideways bending greater than 5°.
- Maintain neutral pelvic tilt under 5°: Sit with your hips level and your pelvis in a neutral position, keeping tilt below 5° to support your lower back.
- Raise laptop screen by 8 cm: Place your laptop on a stable riser or stack of books to elevate the screen so the top is at or just below eye level, reducing neck flexion.
- Move keyboard 10 cm closer: Bring your external keyboard or laptop closer so your elbows can rest at a 90–100° angle, reducing arm extension.
- Use external keyboard and mouse: Connect an external keyboard and mouse to your laptop to allow for proper arm and wrist positioning, minimizing wrist deviation.
- Adjust chair height to 45 cm: Raise or lower your chair so your feet are flat on the floor and your thighs are parallel, supporting a neutral pelvic tilt.

Final Advice

Your current setup poses high ergonomic risks, especially for your elbows, wrists, and neck. Prioritize workstation adjustments and equipment upgrades to reduce pain and prevent further strain. Perform

recommended exercises regularly and take breaks every hour.
