

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk (Angle: 158.16467546307916°)
- Shoulder Elevation: Green risk (Angle: 3.4036803245544434°)
- Elbow Angle: Red risk (Angle: 130.18951456579921°)
- Wrist Deviation: Red risk (Angle: 179.17142911307909°)
- Pelvic Tilt: Yellow risk (Angle: 14.805450439453125°)

Workstation Analysis

Monitor:

- MonitorHeight: Red (Δ 118.70453041791916)
- ViewingDistance: Green (Δ 260.32965087890625)

Chair:

- SeatDepth: Green (Δ 95.02325439453125)

Risk Summary

Posture: red (high risk due to neck flexion, elbow angle, and wrist deviation). Workstation: red (monitor height is a critical issue).

Exercise Recommendations

Neck retractions: Gently pull your head straight back, keeping your chin level, to strengthen neck extensors and counteract forward head posture.

Shoulder blade squeezes: Sit or stand tall, squeeze your shoulder blades together and hold for 5 seconds. Repeat 10 times to improve upper back posture.

Wrist stretches: Extend your arm in front of you, palm up, and gently pull back on your fingers with your other hand. Hold for 15 seconds per side.

Seated pelvic tilts: Sit upright and gently rock your pelvis forward and backward to improve awareness and control of pelvic position.

Elbow flexor stretches: Extend your arm, palm up, and gently press down on your fingers to stretch the forearm and relieve tension from extended elbow postures.

Final Advice

Your current posture and workstation setup present significant ergonomic risks, especially to your neck, wrists, and elbows. Immediate adjustments to monitor height, arm positioning, and wrist alignment are necessary to comply with ISO 9241-5 and reduce the risk of discomfort or injury. Incorporate the recommended exercises and

reassess your setup after making corrections.
