

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

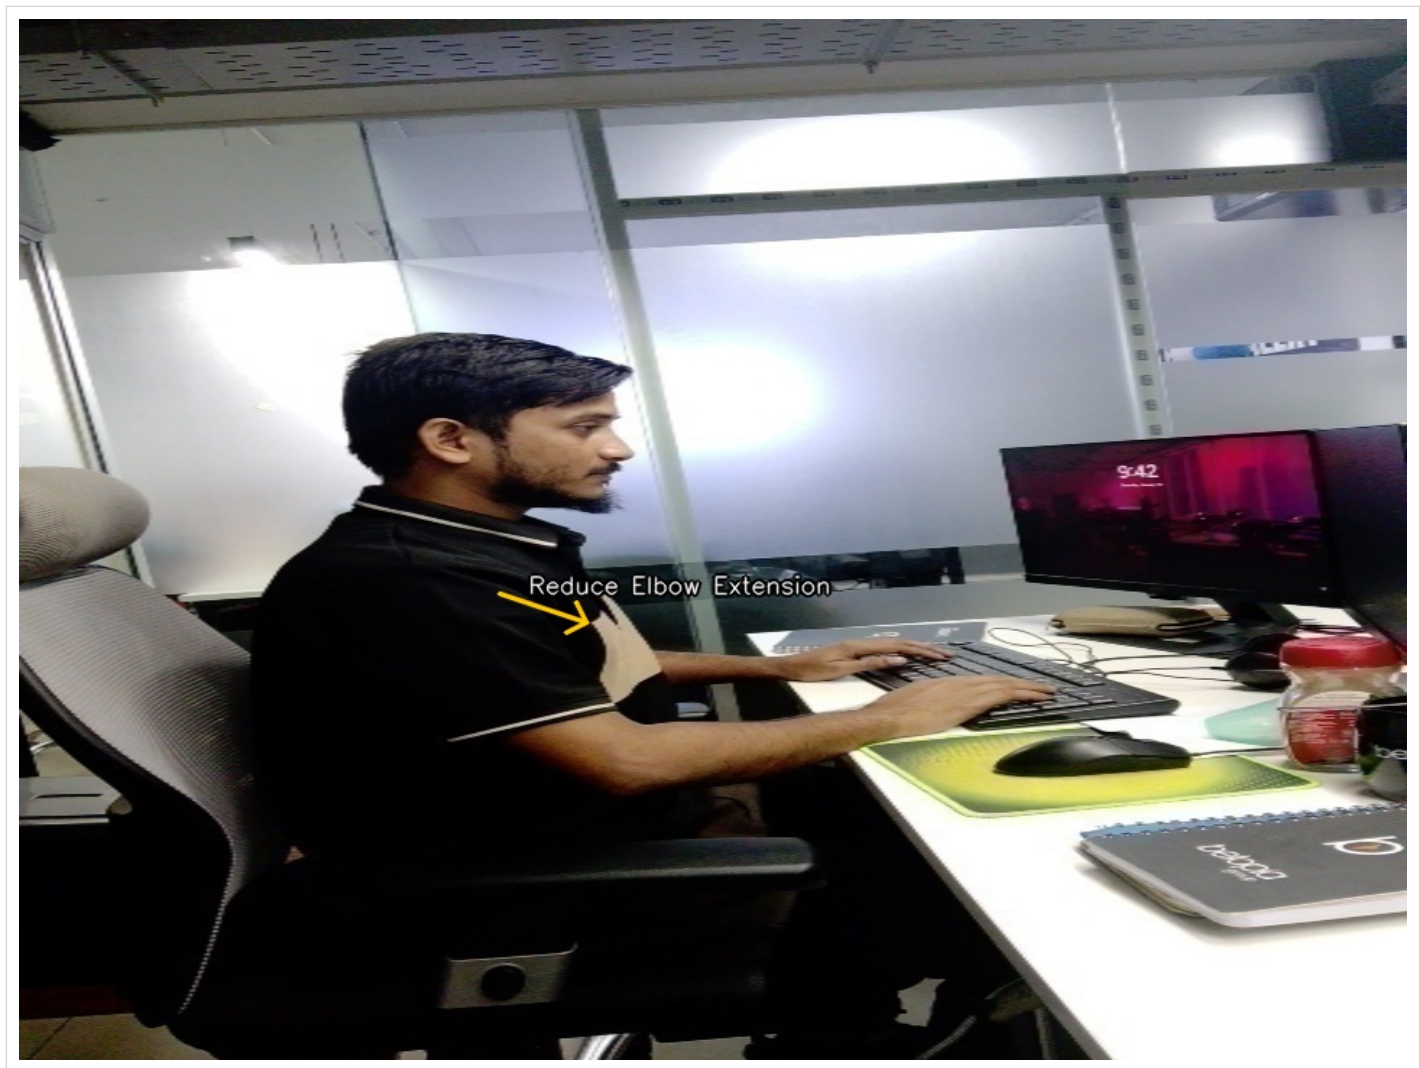

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce pelvic tilt to under 5°: Sit with hips and pelvis upright; use a lumbar cushion if needed to maintain a neutral spine and reduce pelvic tilt from 20° to under 5°.
- Adjust elbow angle to 90-100°: Lower chair or raise desk so elbows are bent between 90° and 100°, reducing strain from current 116°.
- Decrease wrist deviation to under 5°: Keep wrists straight and level with forearms while typing; use a wrist rest if necessary to reduce deviation from 13° to under 5°.
- Raise monitor by 25 cm: Elevate your monitor so the top of the screen is at or just below eye level, correcting a 25 cm height deficit and reducing neck and upper back strain.

Final Advice

Your upper back pain is severe and workstation risks are high. Please implement corrections immediately. Take frequent breaks, and if pain persists or worsens, consult a healthcare professional. Safety note: Always perform stretches and posture exercises gently and stop if you feel pain.
