

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

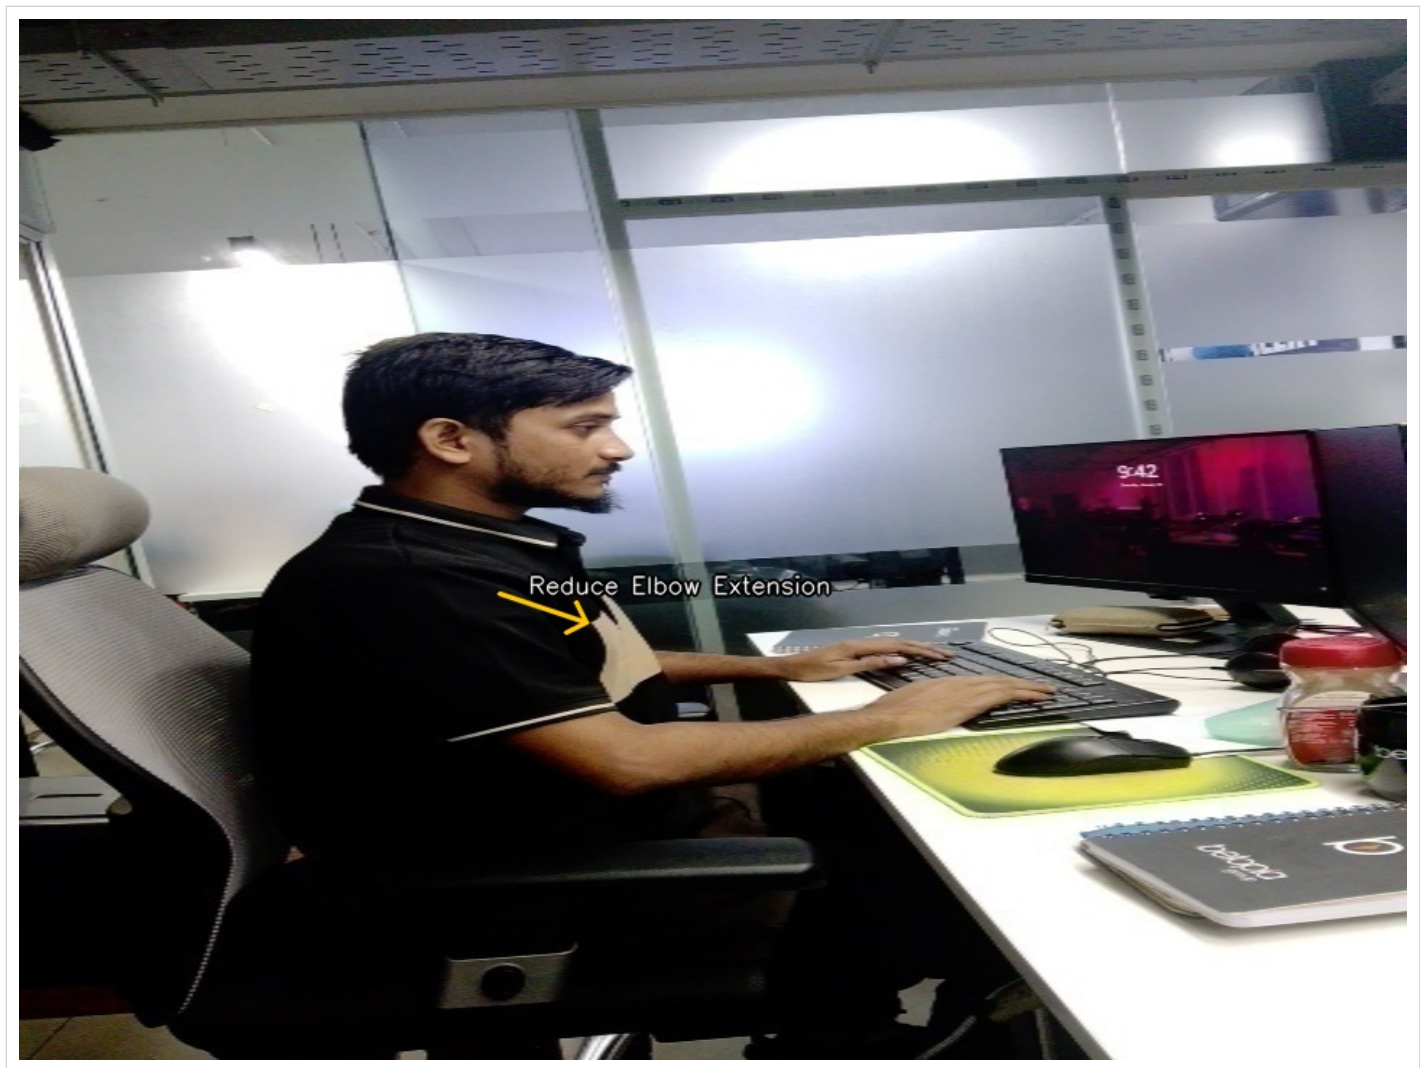

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce pelvic tilt to under 10°: Sit with hips fully back in the chair and use lumbar support to decrease pelvic tilt from 20° to below 10°, aligning your pelvis and lower back.
- Decrease elbow angle to 100°: Adjust chair and keyboard height so elbows are bent at 90-100°, reducing strain from the current 116° angle.
- Lower shoulder elevation below 5°: Relax shoulders and adjust armrests to keep shoulder elevation under 5°, minimizing upper back and shoulder tension.
- Reduce wrist deviation to under 5°: Keep wrists straight by aligning keyboard and mouse with forearms, aiming for less than 5° deviation.
- Raise monitor by 25 cm: Elevate your monitor so the top of the screen is at or just below eye level, correcting the current 25 cm deficit and reducing neck flexion.
- Add lumbar support cushion: Place a lumbar cushion at your lower back to support natural spinal curvature and reduce pelvic tilt.

Final Advice

Your upper back pain is severe and workstation risks are high. Prioritize raising your monitor and adding lumbar support. Take frequent breaks, and if pain persists or worsens, consult a healthcare professional. Always perform stretches slowly and stop if you feel pain.
