Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

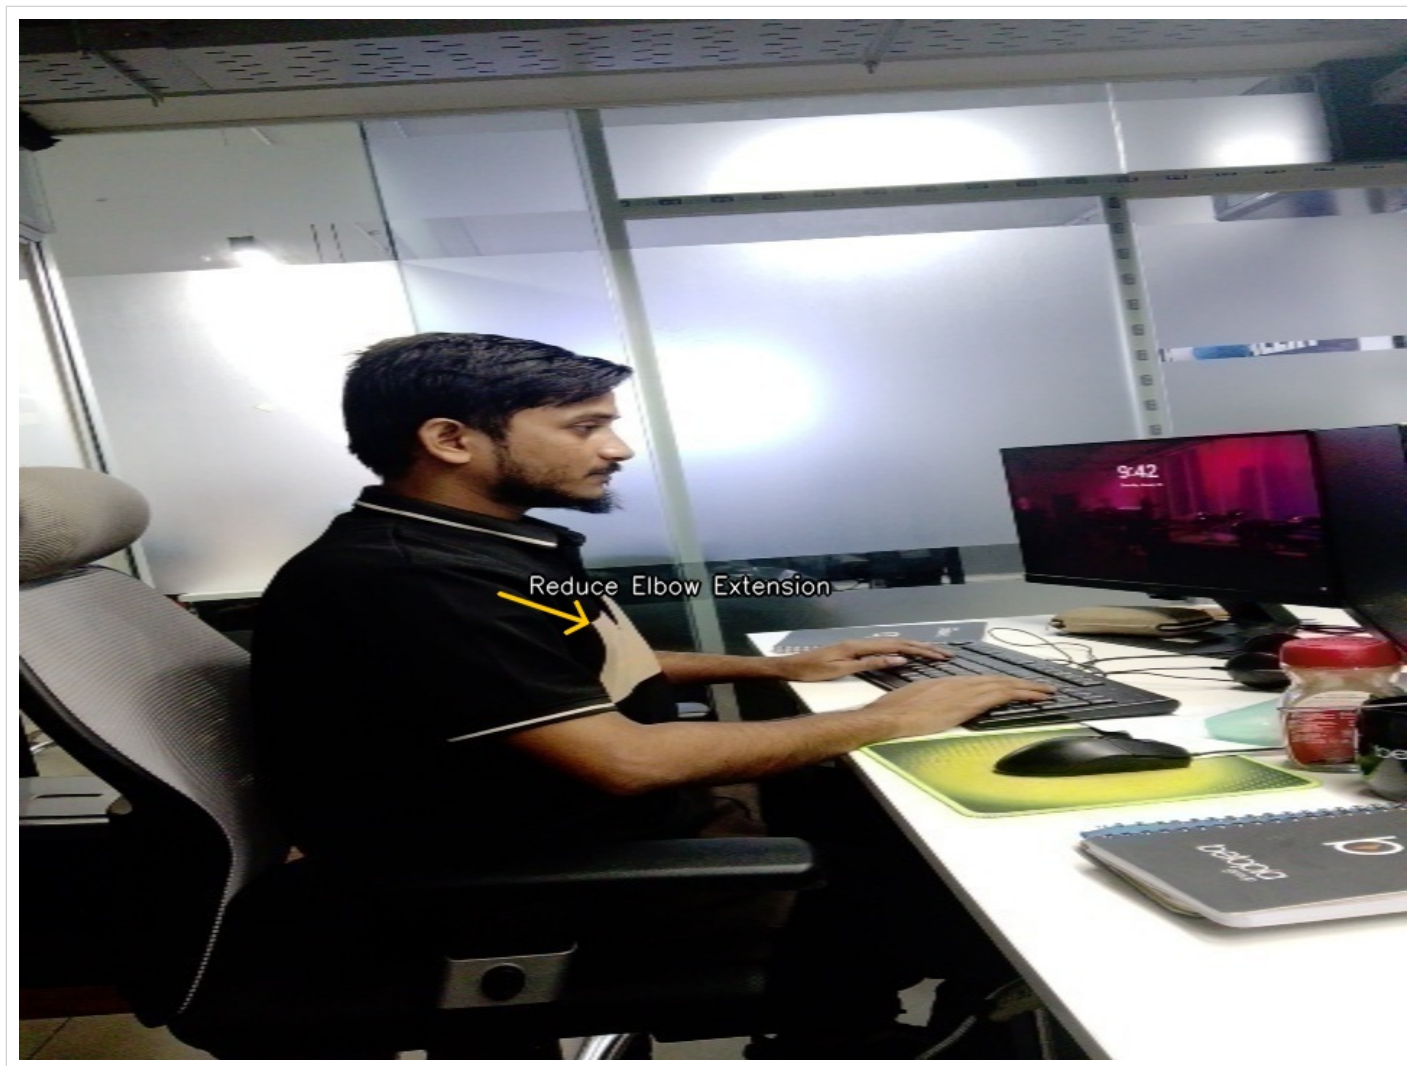

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce pelvic tilt to under 5°: Sit with your hips fully back in the chair, ensuring your pelvis is upright and supported. Adjust your chair backrest to support the natural curve of your lower back, aiming for a pelvic tilt angle below 5°.
- Decrease elbow angle to 100°: Lower your chair or raise your desk so your elbows are bent at approximately 100°, with forearms parallel to the floor and wrists straight while typing.
- Lower shoulder elevation to under 5°: Relax your shoulders and adjust armrests or desk height so your shoulders are not elevated. Aim for shoulders to remain relaxed and level, with elevation under 5°.
- Raise monitor by 25 cm: Place your laptop on a stable riser or stack of books to elevate the top of the screen to eye level, approximately 25 cm higher than its current position.

Final Advice

Your upper back pain is severe and posture risks are high. Please consult a healthcare professional if pain persists or worsens. When performing any posture exercises, move slowly and stop immediately if you feel pain, tingling, or numbness.
