

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

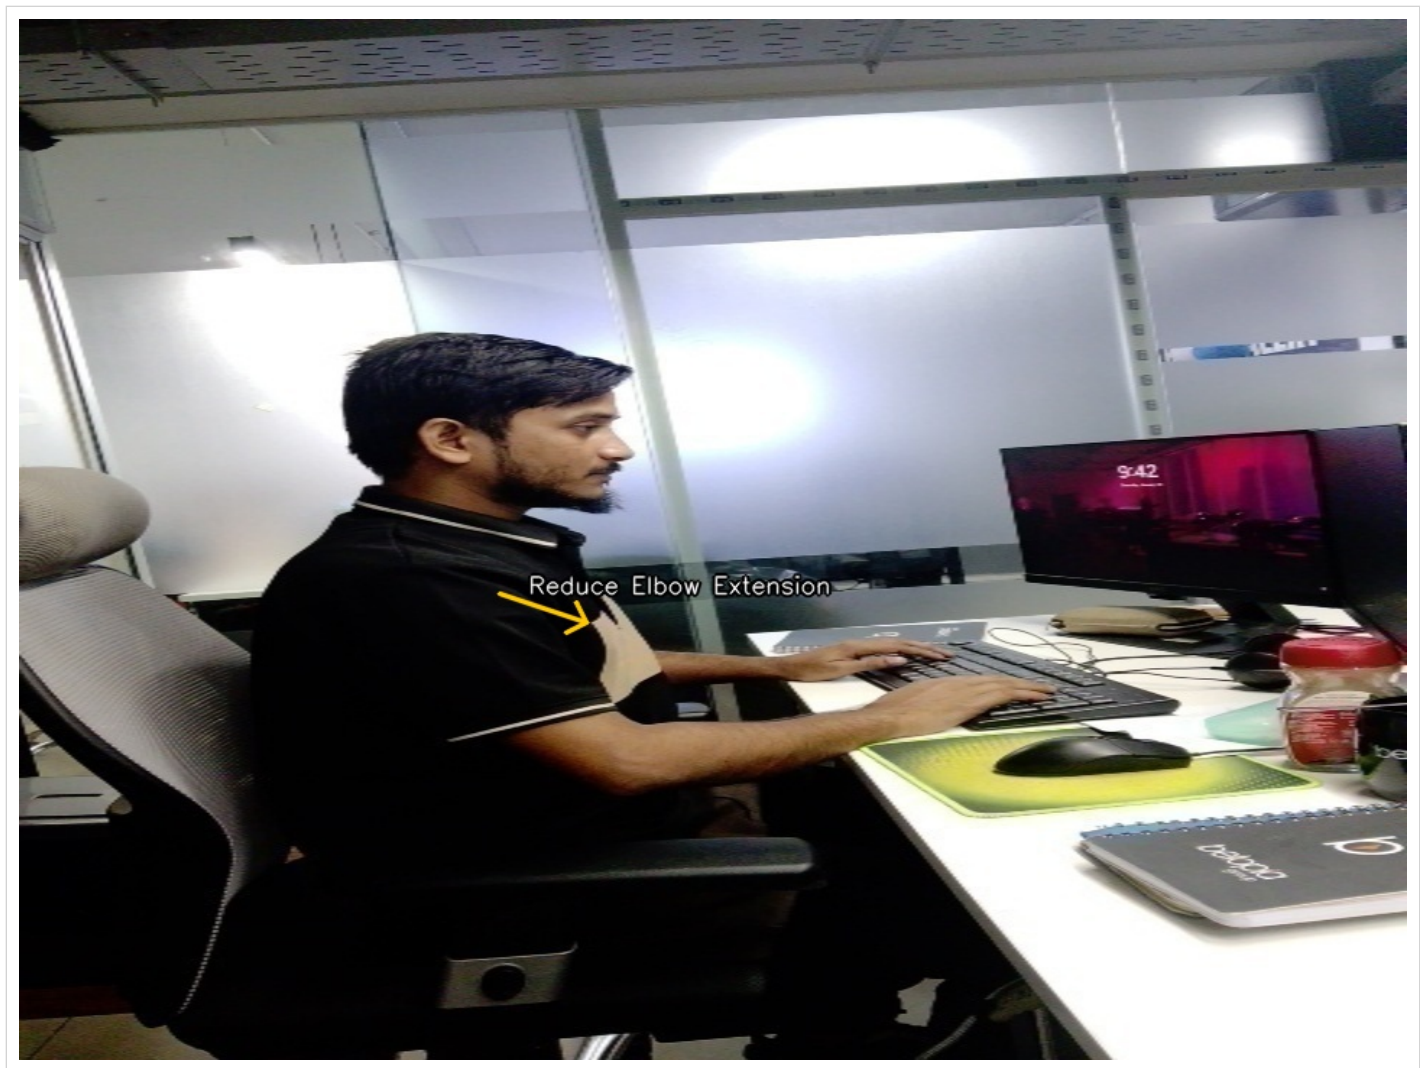

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce elbow angle to 100 degrees: Bring your elbows closer to your body so they are bent at approximately 100 degrees, reducing strain on your upper back and shoulders.
- Decrease pelvic tilt to 0-5 degrees: Sit with your pelvis in a neutral position, ensuring your lower back is supported and your hips are not tilted forward more than 5 degrees.
- Lower wrist deviation below 10 degrees: Keep your wrists straight and aligned with your forearms, minimizing side-to-side bending to reduce wrist and hand discomfort.
- Raise monitor by 25 cm: Elevate your laptop screen or monitor by 25 cm so the top of the screen is at or just below eye level, reducing neck and upper back strain.

Final Advice

Your upper back pain is severe and your workstation setup is causing significant ergonomic risks. Please address the recommended corrections immediately. If pain persists or worsens, consult a healthcare professional. Safety note: Always perform posture or stretching exercises slowly and stop if you feel pain or tingling.
