

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

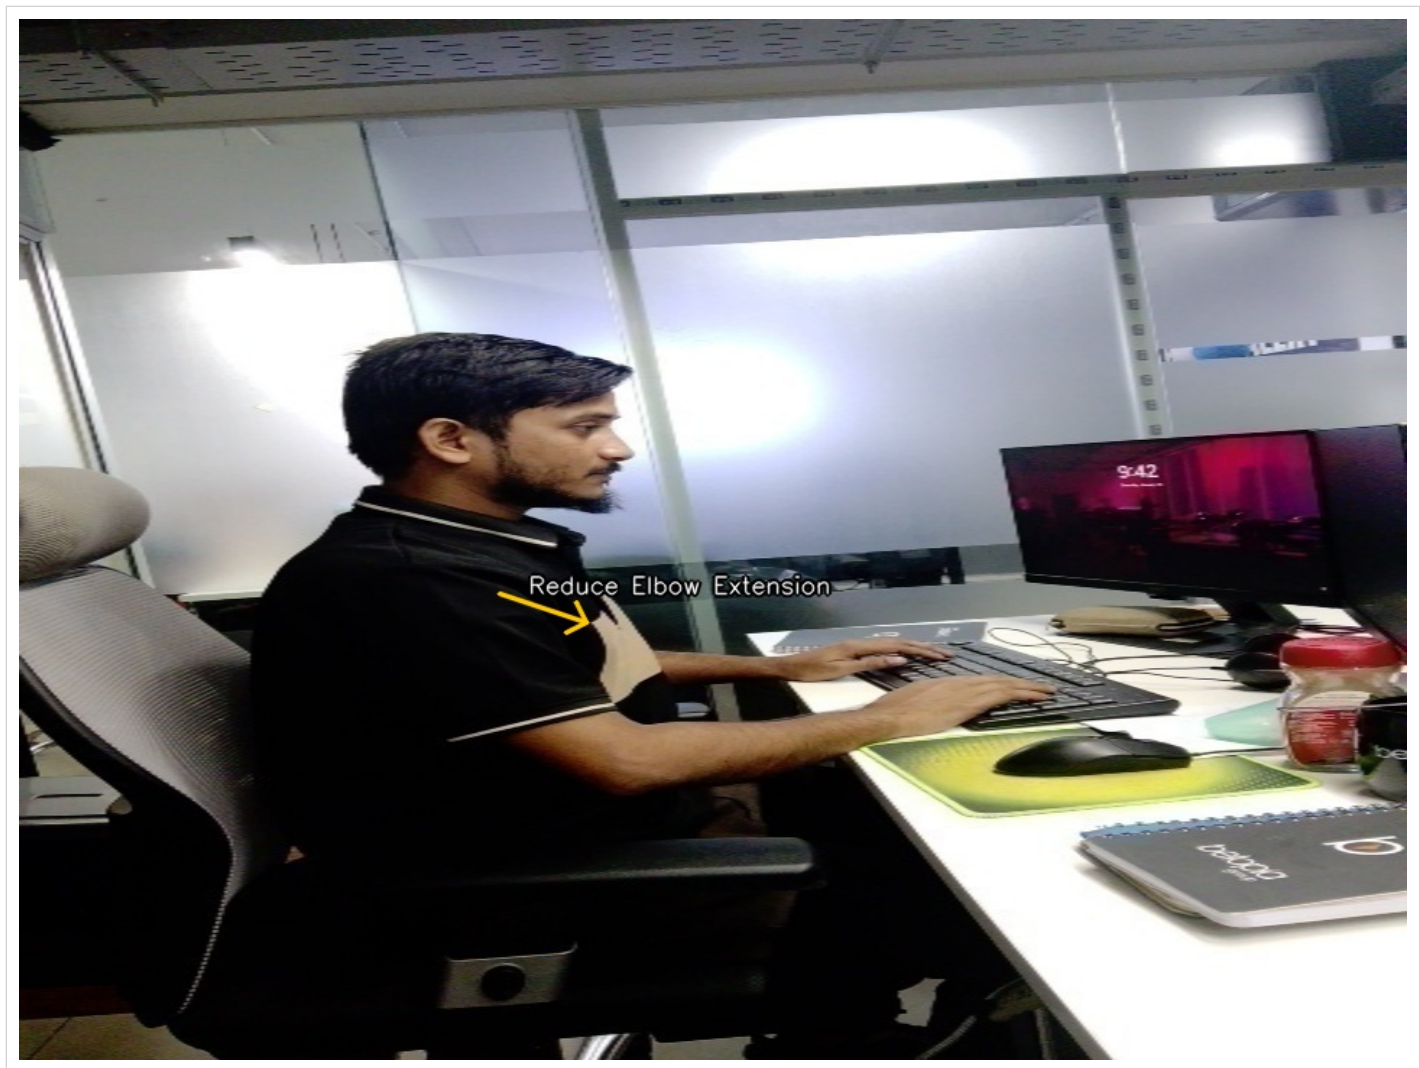

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce pelvic tilt to under 5°: Sit with hips and pelvis upright, using lumbar support to maintain a neutral spine. Avoid slouching or tilting pelvis forward more than 5°.
- Lower elbow angle to 100°: Adjust chair and desk height so elbows are bent at 90-100°, keeping forearms parallel to the floor and shoulders relaxed.
- Reduce wrist deviation to under 5°: Keep wrists straight and aligned with forearms while typing. Use a wrist rest if needed to minimize sideways bending.
- Raise monitor by 25 cm: Place the laptop on a 25 cm riser or stack to bring the top of the screen to eye level, reducing neck and upper back strain.

Final Advice

Your upper back pain is severe and posture risks are high. Implement workstation changes immediately. Take frequent breaks (every 30-45 minutes) and consult a healthcare provider if pain or tingling persists. Safety note: Always perform posture exercises gently and stop if you feel pain.
