

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 8

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 8 cm: Elevate your laptop screen using a riser or stack of books so the top of the screen is at eye level. This reduces neck flexion to under 10°, as required by ISO 9241-5.
- Open elbow angle to 90 degrees: Adjust your chair height and keyboard position so your elbows are bent at approximately 90°, not 60°. This reduces forearm and upper back strain.
- Straighten wrists to neutral position: Use an external keyboard and mouse to keep wrists straight, minimizing deviation to under 10° per ISO 9241-5.
- Sit with pelvis upright at 90°: Adjust your chair and sit back fully so your pelvis is upright, not tilted forward. This supports your lower back and aligns with ISO 9241-5 recommendations.
- Move keyboard 10 cm closer: Place your external keyboard 10 cm closer to the edge of your desk to reduce reach and allow elbows to rest at your sides.
- Add lumbar support cushion: Place a lumbar cushion or rolled towel at your lower back to maintain natural spinal curve and reduce pelvic tilt.

Final Advice

Your reported wrist pain and tingling are severe and may indicate nerve involvement. Please consult a healthcare professional if symptoms persist or worsen. When performing any posture exercises, move slowly and stop if you feel pain or discomfort.
