

# POSTURA

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

### Workstation Analysis

---

### Pain & Risk Summary

---

Average Pain Level: 8

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

### Posture & Ergonomic Corrections

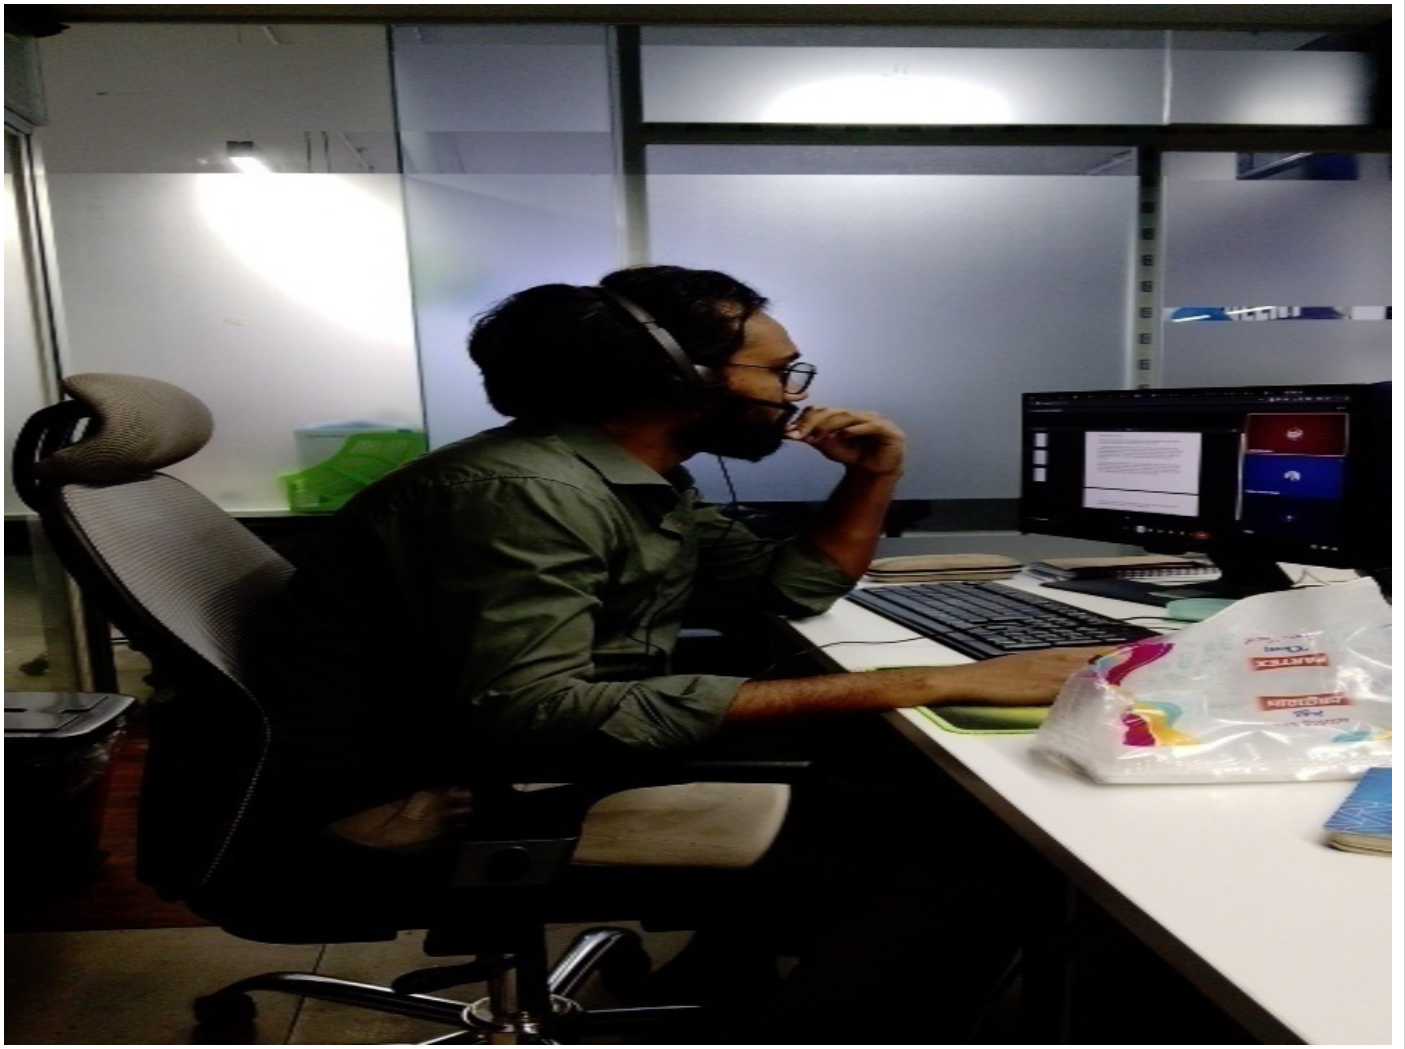

---

- Reduce neck flexion to under 10°: Sit upright and adjust your gaze so your neck bends no more than 10°. This reduces strain and aligns with ISO 9241-5 recommendations.
- Straighten elbows to 90-100° angle: Adjust your arm position so elbows are bent at 90-100°, keeping forearms parallel to the floor to minimize muscle fatigue.
- Keep wrists neutral, under 10° deviation: Position wrists so they remain straight (less than 10° deviation) while typing to reduce compression and nerve irritation.
- Align pelvis to 90° with seat: Sit with hips and pelvis at a 90° angle to the seat, ensuring your lower back is supported and upright.
- Raise laptop screen by 8-10 cm: Use a riser or stack books to elevate the laptop screen so the top is at eye level, reducing neck flexion.
- Use external keyboard and mouse: Connect an external keyboard and mouse, placing them at elbow height and close to the body to maintain neutral wrist and elbow positions.
- Adjust chair seat to 45 cm height: Set chair height so feet are flat on the floor and thighs are parallel, supporting pelvic alignment.

### Final Advice

---

Your current setup poses a high risk for neck, wrist, and lower back strain, especially given your reported pain and tingling. Prioritize immediate workstation adjustments and consider using recommended ergonomic equipment. If wrist pain or tingling worsens, seek medical evaluation. Safety note: Always perform posture exercises gently and stop if you feel pain or numbness.
