

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 8

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 10 cm: Elevate your laptop screen so the top is at eye level, reducing neck flexion to under 10°. Use a riser or stack of books if needed.
- Keep elbows at 90 degrees: Adjust your chair or external keyboard height so elbows are bent at 90°, minimizing strain and improving circulation.
- Straighten wrists to neutral position: Use an external keyboard and mouse placed flat on the desk to keep wrists straight, reducing deviation to under 5°.
- Sit with pelvis upright at 90°: Adjust your chair and sit back fully so your pelvis is upright, not tilted forward or backward, supporting your lower back.
- Add external keyboard and mouse: Connect an external keyboard and mouse to your laptop, positioning them at elbow height to reduce wrist and elbow strain.
- Adjust chair height to 46 cm: Set your chair seat height so your feet are flat on the floor and thighs are parallel, supporting proper pelvic alignment.

Final Advice

Your current setup poses a high risk for neck, wrist, and lower back strain, especially given your reported pain and tingling. Implement corrections immediately. If wrist pain or tingling worsens, seek medical attention. Safety note: Perform all posture exercises gently and stop if you feel pain or numbness.
