

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

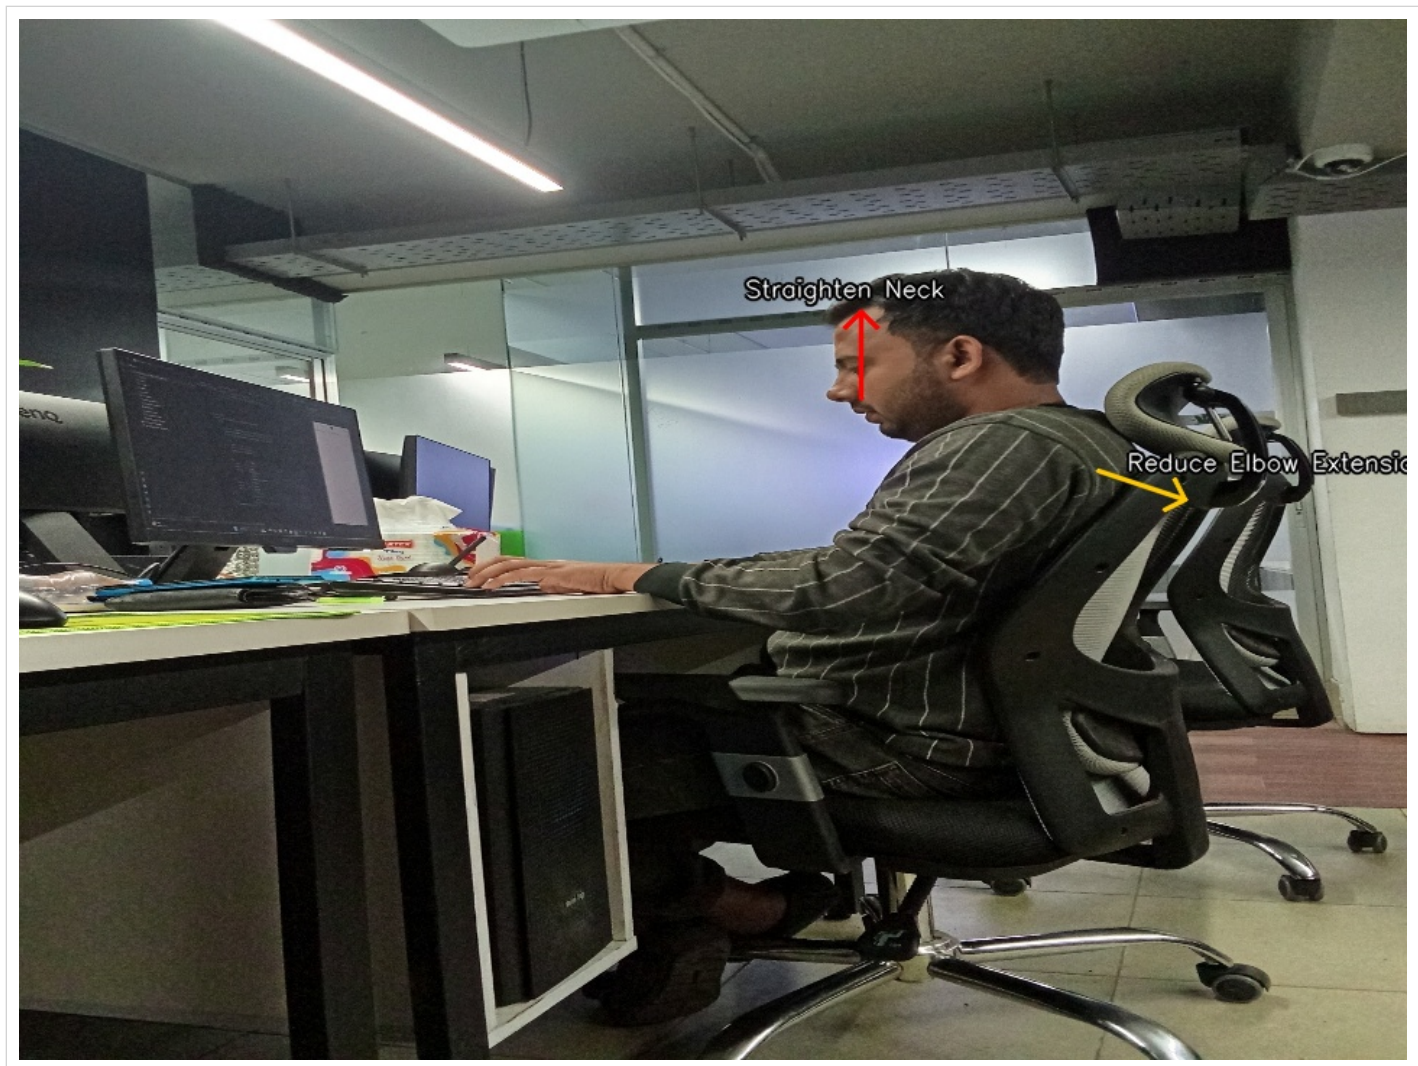

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 18 cm: Increase monitor height so the top edge is at or just below eye level, reducing neck flexion to under 20° as per ISO 9241-5.
- Bend elbows to 90-100 degrees: Adjust arm position so elbows are bent at 90-100°, keeping forearms parallel to the floor and close to the body.
- Reduce wrist deviation to under 5 degrees: Align wrists straight with forearms while typing or using the mouse, minimizing sideways bending.
- Sit with pelvis upright at 0-10 degrees: Adjust sitting posture to keep pelvis nearly vertical, using lumbar support if needed to avoid excessive tilt.
- Raise chair seat to 46 cm: Adjust chair height so feet are flat on the floor and thighs are parallel, supporting a neutral pelvis and elbow angle.
- Move keyboard 8 cm closer: Position keyboard so elbows remain at 90-100° and wrists stay straight, reducing reach and strain.

Final Advice

Your pain intensity and posture risks are severe. Please consult a medical professional immediately if symptoms worsen, especially if tingling or numbness persists. Take frequent breaks, and do not perform any exercises if you experience sharp pain. All posture changes should be made gradually and safely.
