

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 8 cm: Elevate your laptop screen using a riser or stack of books so the top of the screen is at eye level. This reduces neck flexion from 17.5° to under 5°, aligning with ISO 9241-5 recommendations.
- Keep wrists straight during typing: Adjust hand position so wrists remain in a neutral, straight alignment (0-10° deviation) while typing to reduce strain and comply with ISO 9241-5.
- Open elbow angle to 100 degrees: Move your chair slightly back or adjust arm position so elbows are at 100°, reducing tension and matching ISO 9241-5 guidelines.
- Use external keyboard 5 cm forward: Place an external keyboard 5 cm in front of the laptop to allow relaxed arm and wrist posture, minimizing wrist deviation and elbow overextension.
- Add wrist rest 2 cm thick: Place a 2 cm thick wrist rest in front of the keyboard to support neutral wrist posture and reduce pressure on wrists.

Final Advice

Your upper back pain is severe and combined with high neck and wrist strain. Please implement corrections immediately and consult a healthcare professional if symptoms persist or worsen. Safety note: Always perform posture exercises gently and stop if you feel pain or tingling.
