

# POSTURA

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

### Workstation Analysis

---

- Chair: SeatDepth: Green

### Pain & Risk Summary

---

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

### Posture & Ergonomic Corrections

---

- Raise monitor by 10 cm: Elevate your laptop screen using a riser or stack of books so the top of the screen is at or just below eye level. This reduces neck flexion from 19° to the ISO 9241-5 recommended 0-10° range.
- Keep wrists straight during typing: Adjust your hand position so wrists remain in a neutral (straight) alignment, minimizing deviation to less than 10°, as per ISO 9241-5.
- Adjust elbow angle to 100°: Bring your chair closer or adjust armrest height so your elbows are bent at approximately 100°, reducing strain from the current 110°.
- Use external keyboard 10 cm from edge: Place an external keyboard 10 cm from the desk edge to allow forearm support and maintain neutral wrist posture, as required by ISO 9241-5.
- Position mouse next to keyboard: Place your mouse directly beside the keyboard to avoid excessive wrist deviation and shoulder reach.

### Final Advice

---

Your posture and workstation setup are causing significant neck, upper back, and wrist strain, with high pain intensity reported. Prioritize raising your monitor and using external input devices. Take frequent breaks and perform gentle neck, wrist, and upper back stretches. Safety note: Always consult a healthcare professional before starting any exercise routine, especially if you experience tingling or persistent pain.
