

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 10 cm: Elevate your laptop screen using a riser or stack of books so the top of the screen is at or just below eye level. This reduces neck flexion from 19° to within the ISO 9241-5 recommended range (<10°).
- Keep wrists straight during typing: Adjust your typing posture so your wrists remain neutral (0-5° deviation), avoiding the current 18° extension. This helps prevent wrist strain and tingling.
- Open elbow angle to 100°: Slightly adjust your chair or arm position so your elbows are at 100°, reducing muscle tension and aligning with ISO 9241-5 guidelines.
- Use external keyboard 10 cm from edge: Place an external keyboard 10 cm from the desk edge to allow relaxed arm and wrist positioning, minimizing wrist deviation and upper back strain.
- Position mouse beside keyboard: Keep your mouse directly next to the keyboard to avoid reaching and reduce upper back and wrist discomfort.

Final Advice

Your upper back pain is severe and combined with wrist tingling and neck discomfort. Please implement corrections immediately and consult a healthcare provider if symptoms persist or worsen. Safety note: Always perform posture exercises slowly and stop if you feel pain or tingling.
