

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 8 cm: Elevate your laptop screen using a riser or stack of books so the top of the screen is at or just below eye level. This reduces neck flexion to under 10°, as required by ISO 9241-5.
- Keep wrists straight during typing: Adjust hand position and use a wrist rest to maintain wrists in a neutral (0-5°) position, minimizing deviation and reducing strain per ISO 9241-5.
- Adjust elbow angle to 100°: Bring keyboard and mouse closer so elbows are bent at about 100°, reducing overextension and promoting relaxed shoulders as per ISO 9241-5.
- Use external keyboard 5 cm forward: Place an external keyboard 5 cm in front of you to allow elbows to rest at 100°, reducing wrist deviation and upper back strain.
- Add external mouse beside keyboard: Position an external mouse next to the keyboard to keep wrists straight and minimize awkward hand positions, in line with ISO 9241-5.

Final Advice

Your upper back pain is severe and your wrist and neck pain are moderate, with significant ergonomic risks detected. Please implement the corrections and equipment recommendations above. Take frequent breaks (every 30-45 minutes), and if tingling or pain persists or worsens, consult a healthcare professional. Safety note: Always perform stretches and posture exercises gently and stop if you feel pain.
