

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 10 cm: Elevate your laptop screen using a riser or stack of books so the top of the screen is at or just below eye level. This reduces neck flexion to within the ISO 9241-5 recommended range (0-10°), minimizing neck and upper back strain.
- Keep wrists straight during typing: Adjust your typing position so that your wrists remain in a neutral, straight alignment (0-10° deviation). This reduces excessive wrist extension, lowering risk of discomfort and nerve symptoms.
- Use external keyboard 5 cm from desk edge: Place an external keyboard 5 cm from the front edge of your desk to allow your elbows to rest at a 90-100° angle, as recommended by ISO 9241-5. This helps reduce wrist deviation and elbow overextension.

Final Advice

Your posture and workstation setup are contributing to significant neck, upper back, and wrist strain, especially given your reported pain and symptoms. Prioritize raising your monitor and using an external keyboard to achieve neutral neck and wrist positions. Take regular breaks every 30-60 minutes. Safety note: If tingling or pain worsens, consult a healthcare provider before starting any stretching or exercise routine.
