

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

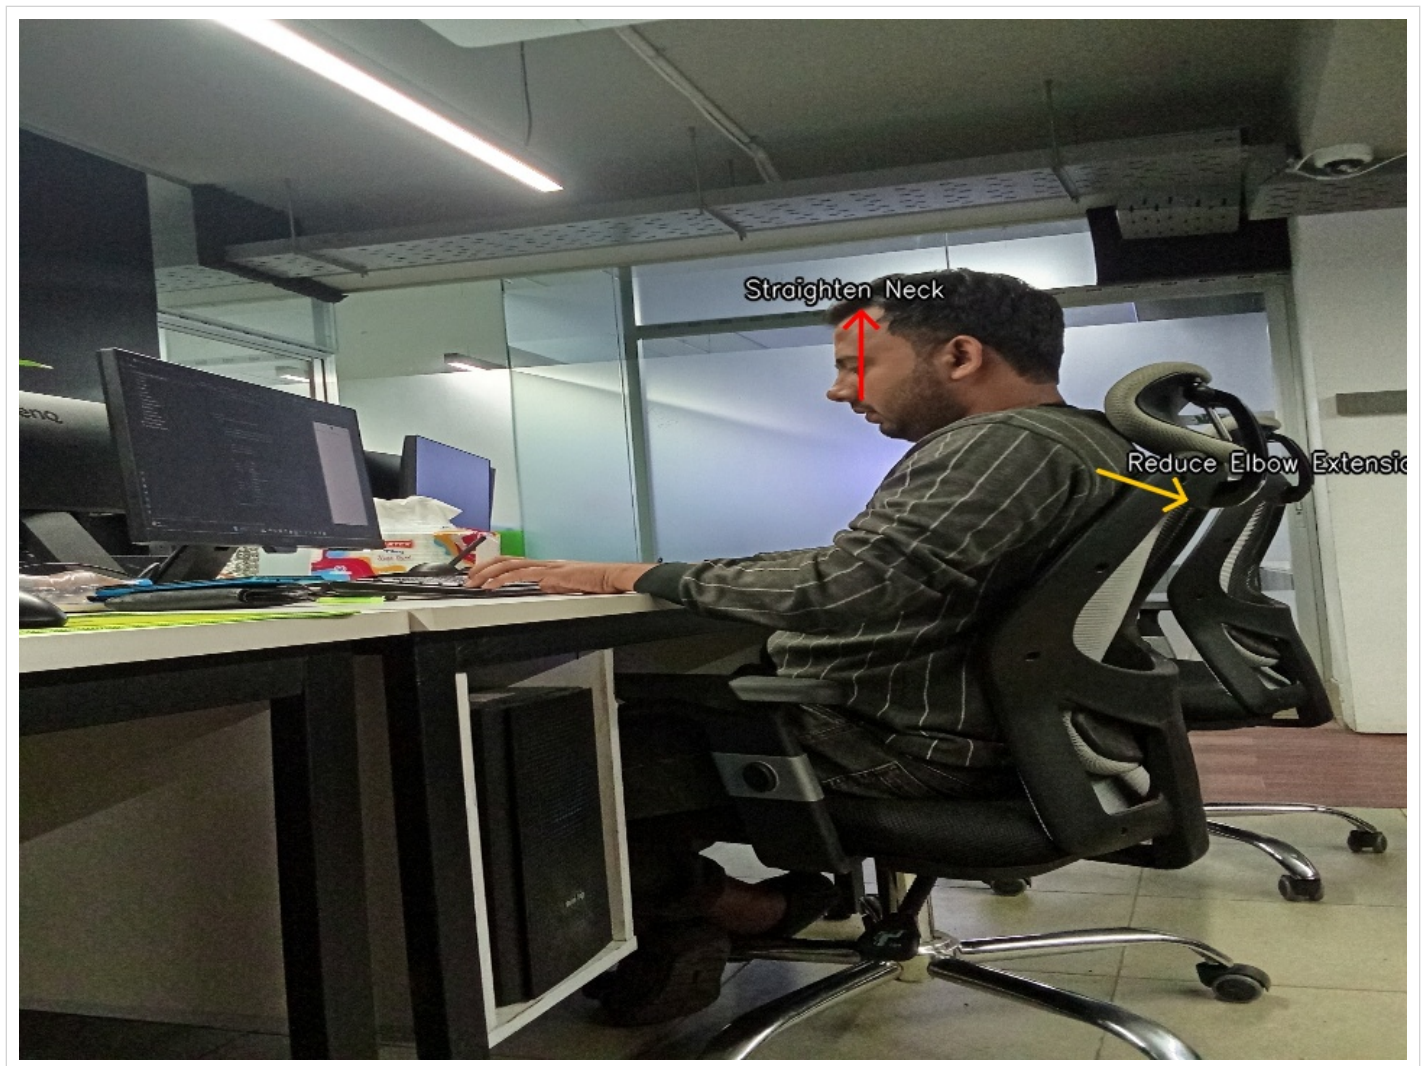

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 18 cm: Elevate your monitor so the top edge is at or just below eye level. This will reduce neck flexion from 65° to under 20°, as required by ISO 9241-5.
- Bend elbows to 90-100 degrees: Adjust your chair and desk so your elbows are bent at a right angle (90-100°), not extended at 155°. This reduces strain on wrists and shoulders.
- Reduce wrist deviation to under 5 degrees: Reposition your keyboard and mouse so your wrists remain straight, minimizing deviation to less than 5° as per ISO 9241-5.
- Adjust pelvis to upright position: Sit with your pelvis upright (neutral tilt, under 10°). Use lumbar support if needed to maintain this posture.
- Raise chair seat to 46 cm: Increase your chair height so your feet are flat on the floor and your thighs are parallel, supporting a 90° knee angle.
- Move keyboard 8 cm closer: Bring your keyboard closer to reduce arm extension and maintain elbows at 90-100°.

Final Advice

Your pain intensity and posture risks are severe. Please consult a healthcare professional immediately if symptoms worsen, especially with tingling or numbness. Take frequent breaks, and do not perform any exercises if you experience increased pain. All corrections should be implemented gradually and monitored for comfort and safety.
