

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Reduce neck flexion to under 5°: Sit upright and align your head so your gaze is straight ahead, minimizing neck bending. Aim for your monitor's top edge to be at or just below eye level to keep neck flexion below 5° as per ISO 9241-5.
- Keep wrists neutral within 5°: Adjust your hand and forearm position so your wrists remain straight, not bent up, down, or sideways. Maintain wrist deviation within 5° to reduce strain and comply with ISO 9241-5.
- Adjust elbow angle to 100°: Position your chair and keyboard so your elbows are bent at about 100°, close to your sides, to reduce muscle load and comply with ISO 9241-5.
- Raise monitor by 10 cm: Use a monitor riser or stack stable books to elevate your monitor so the top edge is at or just below eye level, reducing neck flexion to under 5°.
- Move keyboard 5 cm closer: Bring your keyboard closer to the edge of your desk to allow your elbows to rest at about 100° and wrists to remain straight, minimizing overreaching.
- Use ergonomic keyboard with split design: Switch to a split or tented ergonomic keyboard to help keep wrists in a neutral position and reduce ulnar deviation.

Final Advice

Your pain intensity and posture risks are high. Please address workstation setup immediately. If symptoms (pain, tingling, stiffness) persist or worsen, consult a healthcare professional. Safety note: Perform all posture corrections and exercises slowly and stop if you feel pain.
