

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 10 cm: Elevate your monitor so the top edge is at or just below eye level. This reduces neck flexion from 17.7° to within the ISO 9241-5 recommended range (0–10°), minimizing neck strain.
- Straighten wrists to neutral position: Adjust your typing posture so wrists remain straight (0–10° deviation). This addresses the current 29.4° wrist deviation, reducing risk of nerve compression and carpal tunnel syndrome.
- Bend elbows to 100 degrees: Bring your chair closer or adjust armrests so elbows are bent at approximately 100°, not 113.6°, to reduce forearm and shoulder fatigue per ISO 9241-5.
- Move keyboard 8 cm closer: Position your keyboard so your elbows stay at your sides and wrists remain straight, reducing excessive reach and wrist extension.

Final Advice

Your reported pain levels are severe (neck, upper back, wrists/hands: 9/10) and you experience tingling and stiffness. Please consult a healthcare professional immediately to rule out serious nerve or musculoskeletal conditions. Make workstation adjustments only after medical clearance. Safety note: Always perform any posture or stretching exercises gently and stop if you experience pain, numbness, or increased tingling.
