

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

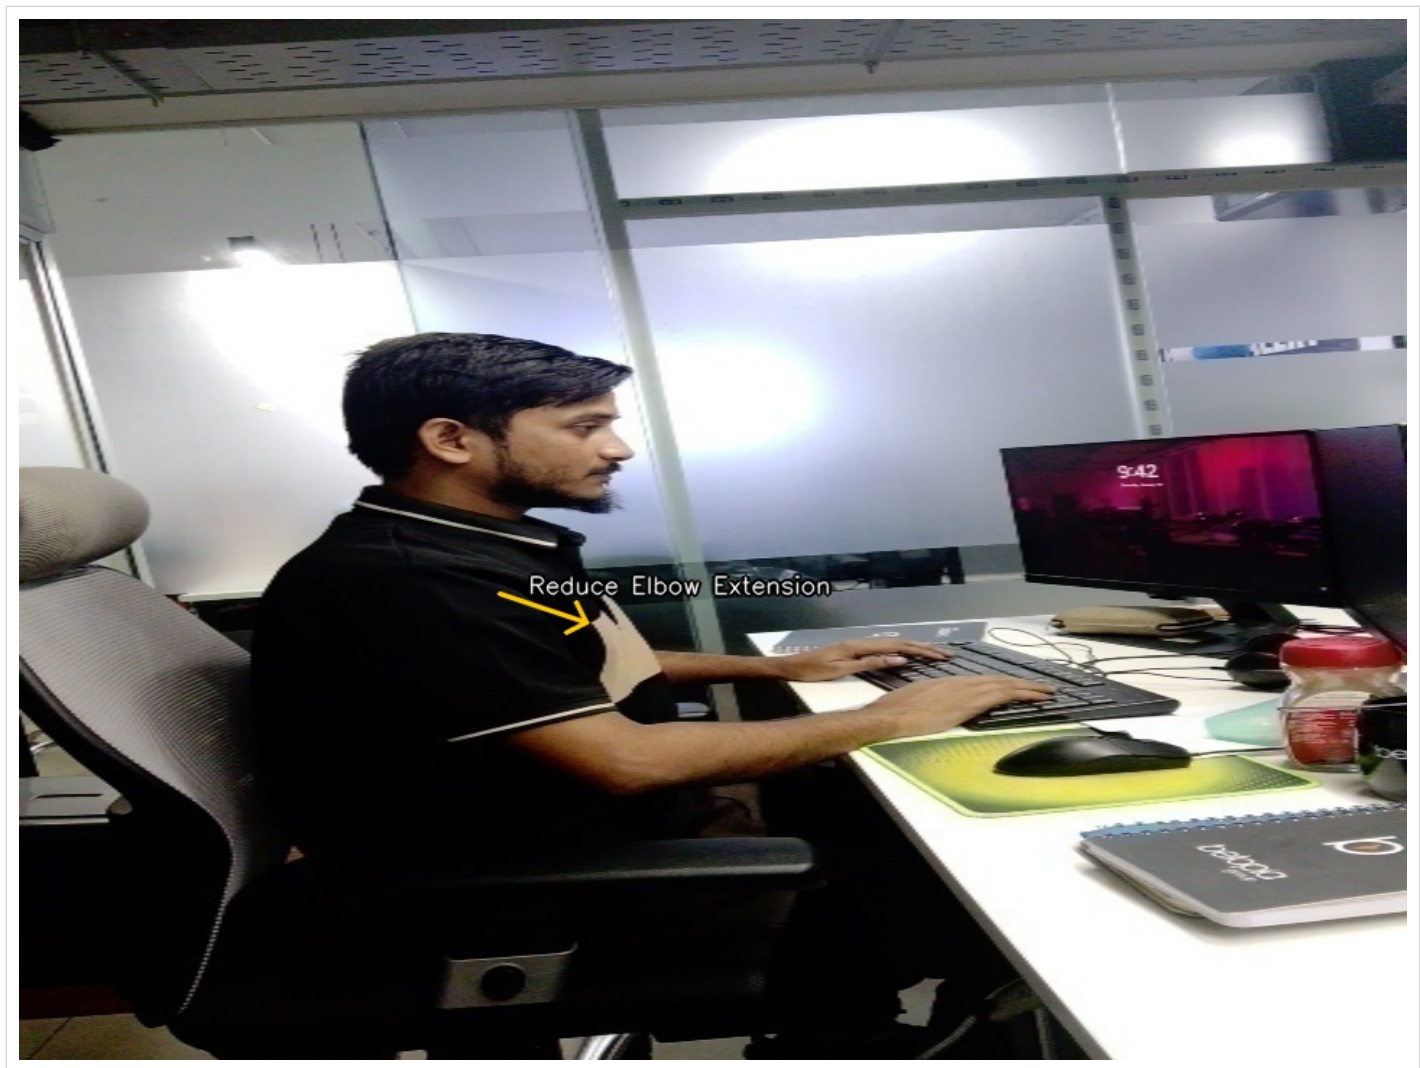

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce neck flexion to 0-5°: Sit upright with your head balanced over your shoulders, keeping your chin level and eyes forward. Avoid bending your neck forward more than 5 degrees to minimize strain.
- Lower shoulder elevation below 5°: Relax your shoulders and let them drop naturally. Adjust armrests or desk height so your shoulders are not raised more than 5 degrees while typing or using the mouse.
- Bend elbows to 90-100°: Position your chair and keyboard so your elbows are bent at a right angle (90-100 degrees), with forearms parallel to the floor and wrists straight.
- Keep wrist deviation under 5°: Align your wrists straight with your forearms while typing and using the mouse. Avoid bending wrists sideways more than 5 degrees.
- Reduce pelvic tilt below 10°: Sit with your pelvis in a neutral position, using lumbar support if needed, so your lower back maintains its natural curve and pelvic tilt is less than 10 degrees.
- Lower monitor by 25 cm: Adjust your monitor height so the top of the screen is at or just below eye level, reducing neck flexion and strain.

Final Advice

Your reported pain levels and workstation risks are severe. Please consult a medical professional immediately for assessment of your neck, upper back, and wrist symptoms. Avoid prolonged sitting and repetitive movements until cleared by a healthcare provider.
