

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

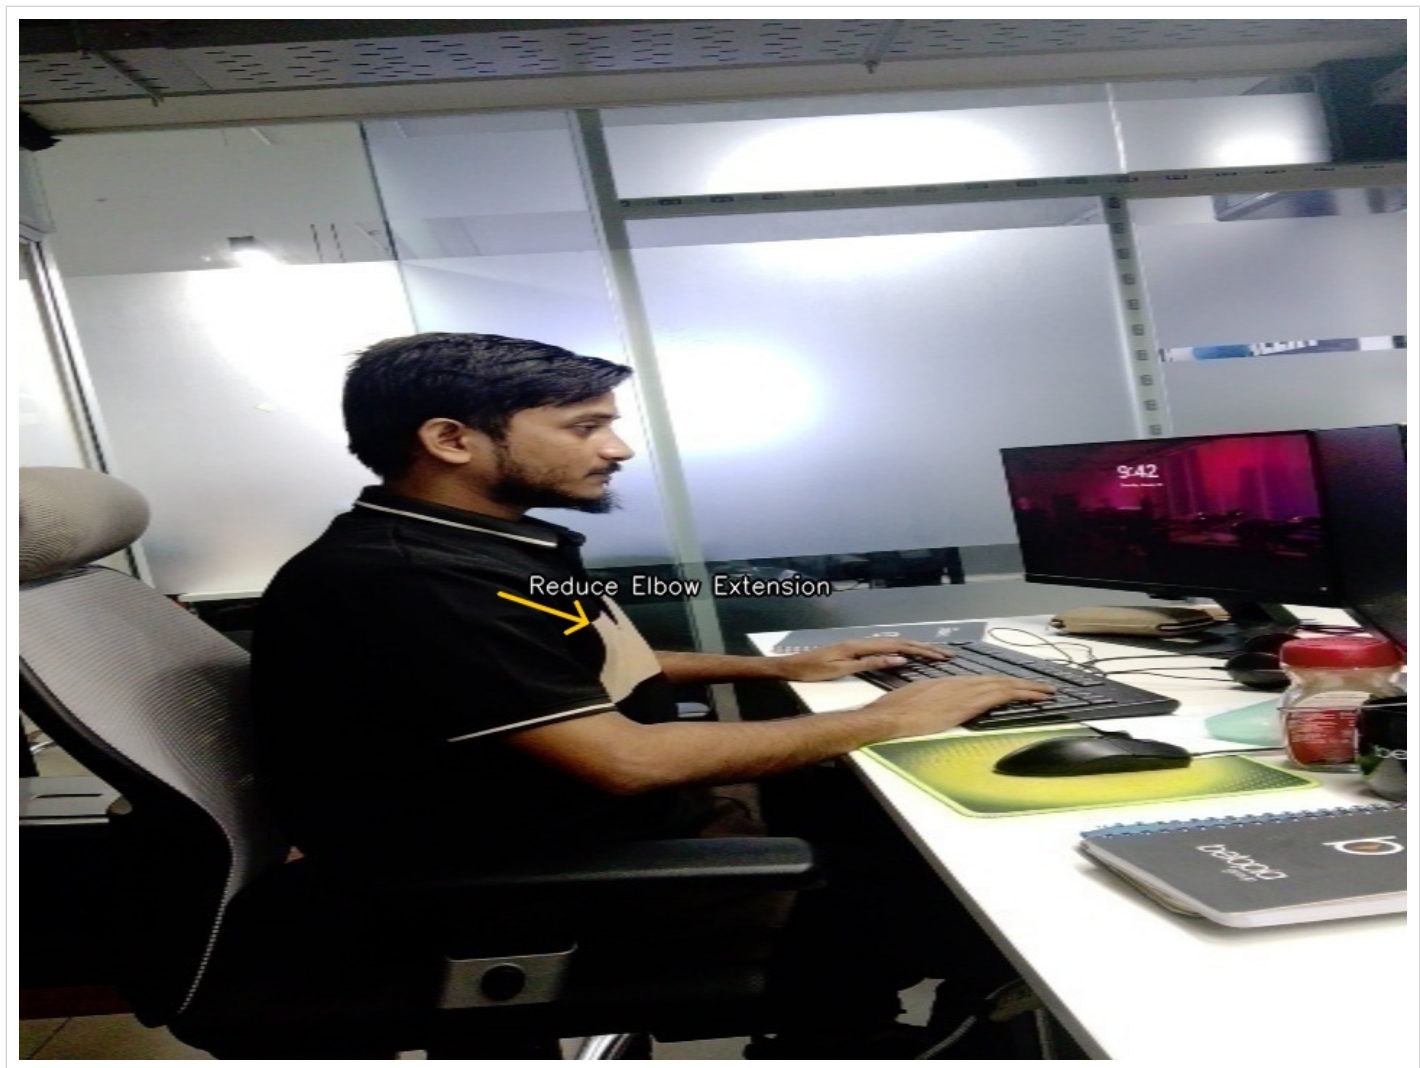

Average Pain Level: 7

Posture & Ergonomic Corrections

- Reduce neck flexion to under 5°: Sit upright and adjust your head position so your neck bends forward less than 5 degrees. This reduces strain and aligns with ISO 9241-5 recommendations for neutral neck posture.
- Lower shoulder elevation below 5°: Relax your shoulders and keep them level, ensuring elevation is less than 5 degrees. This minimizes muscle tension and complies with ISO 9241-5 for shoulder comfort.
- Bend elbows to 90-100° angle: Adjust your arm position so your elbows are bent between 90 and 100 degrees, keeping forearms parallel to the floor. This reduces nerve compression and follows ISO 9241-5 guidelines.
- Reduce wrist deviation to under 5°: Keep wrists straight and aligned with your forearms, aiming for less than 5 degrees deviation. This prevents strain and meets ISO 9241-5 standards for wrist posture.
- Reduce pelvic tilt to under 10°: Sit back fully in your chair with your pelvis upright, aiming for less than 10 degrees tilt. This supports spinal alignment as per ISO 9241-5.
- Lower monitor by 25 cm: Adjust your monitor so the top edge is at or just below eye level, lowering it by 25 cm to reduce neck flexion and comply with ISO 9241-5.

Final Advice

Your reported pain levels are severe (9/10) in the neck, upper back, and wrists, with additional symptoms of tingling and stiffness. Please consult a healthcare provider immediately to rule out serious conditions such as nerve compression or acute musculoskeletal injury. Avoid prolonged desk work until medically cleared. Safety note: Always perform posture exercises gently and stop if you experience increased pain, numbness, or tingling.
