

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

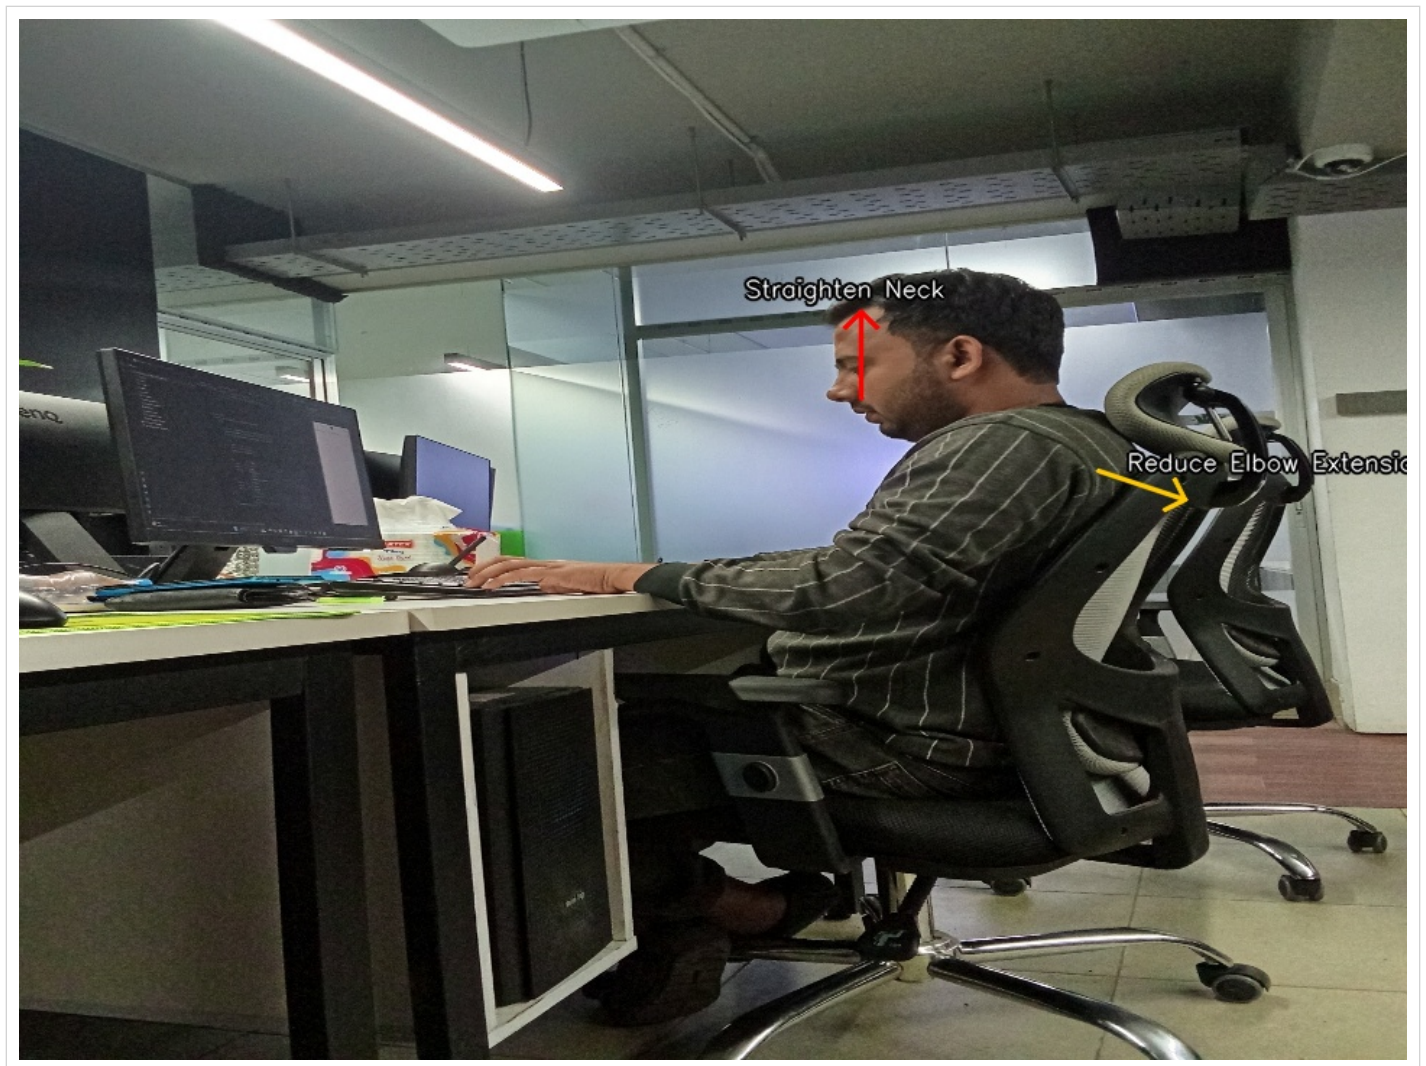

Average Pain Level: 7

Posture & Ergonomic Corrections

- Raise monitor by 18 cm: Elevate your monitor so the top edge is at or just below eye level. This will reduce neck flexion from 65° to the ISO-recommended 0–20° range.
- Bend elbows to 90 degrees: Adjust your chair and desk height so your elbows are bent at 90°, not 155°, with forearms parallel to the floor.
- Reduce wrist angle to under 5°: Position keyboard and mouse so wrists remain straight, minimizing deviation to less than 5° as per ISO 9241-5.
- Sit with pelvis upright at 0° tilt: Adjust your sitting posture and chair backrest so your pelvis is upright, reducing tilt from 63° to 0°.
- Raise chair seat to 46 cm: Increase chair height so your feet remain flat and elbows are at 90°, supporting upright posture.
- Move keyboard 10 cm closer: Bring keyboard closer to reduce arm extension and help maintain proper elbow angle.

Final Advice

Your reported pain levels are severe (9/10) in the neck, upper back, and wrists, with tingling and stiffness. Please consult a healthcare provider immediately to rule out serious conditions. Make workstation changes only after medical clearance. Safety note: Always consult your doctor before starting any new stretches or exercises, especially with severe pain or neurological symptoms.
