

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

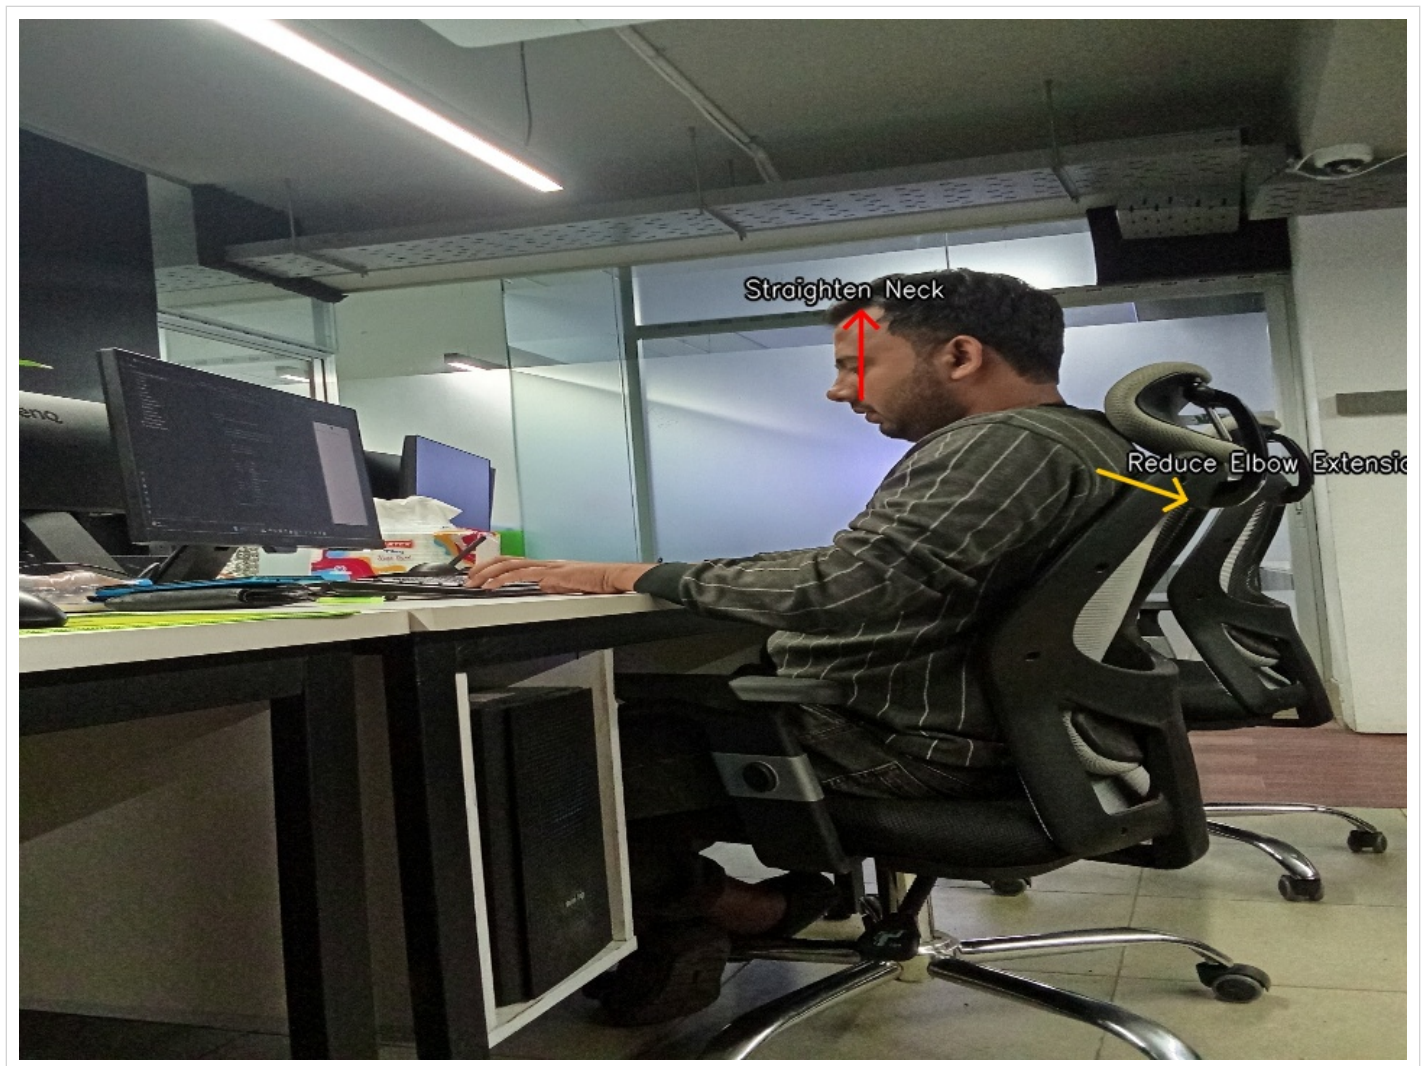

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 18 cm: Increase monitor height so the top edge is at or just below eye level, reducing neck flexion from 65° to under 20° as per ISO 9241-5.
- Bend elbows to 90-100 degrees: Adjust chair and desk so elbows are comfortably bent at 90-100°, not extended at 155°, to reduce upper limb strain.
- Reduce wrist deviation to under 5 degrees: Reposition keyboard and mouse to keep wrists straight, minimizing deviation from current 12° to under 5°.
- Tilt pelvis to neutral (0-10 degrees): Adjust seat pan and lumbar support so pelvis is upright, reducing tilt from 63° to under 10°.
- Raise chair seat to 46 cm: Increase chair height so forearms are parallel to desk and feet remain flat on the floor.
- Move keyboard 8 cm closer: Bring keyboard closer to reduce arm extension and maintain elbows at 90-100°.

Final Advice

Your pain intensity and posture risks are severe. Please seek prompt medical evaluation for your neck, upper back, and wrist symptoms, especially given the high pain and tingling. Do not delay professional assessment.
