

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

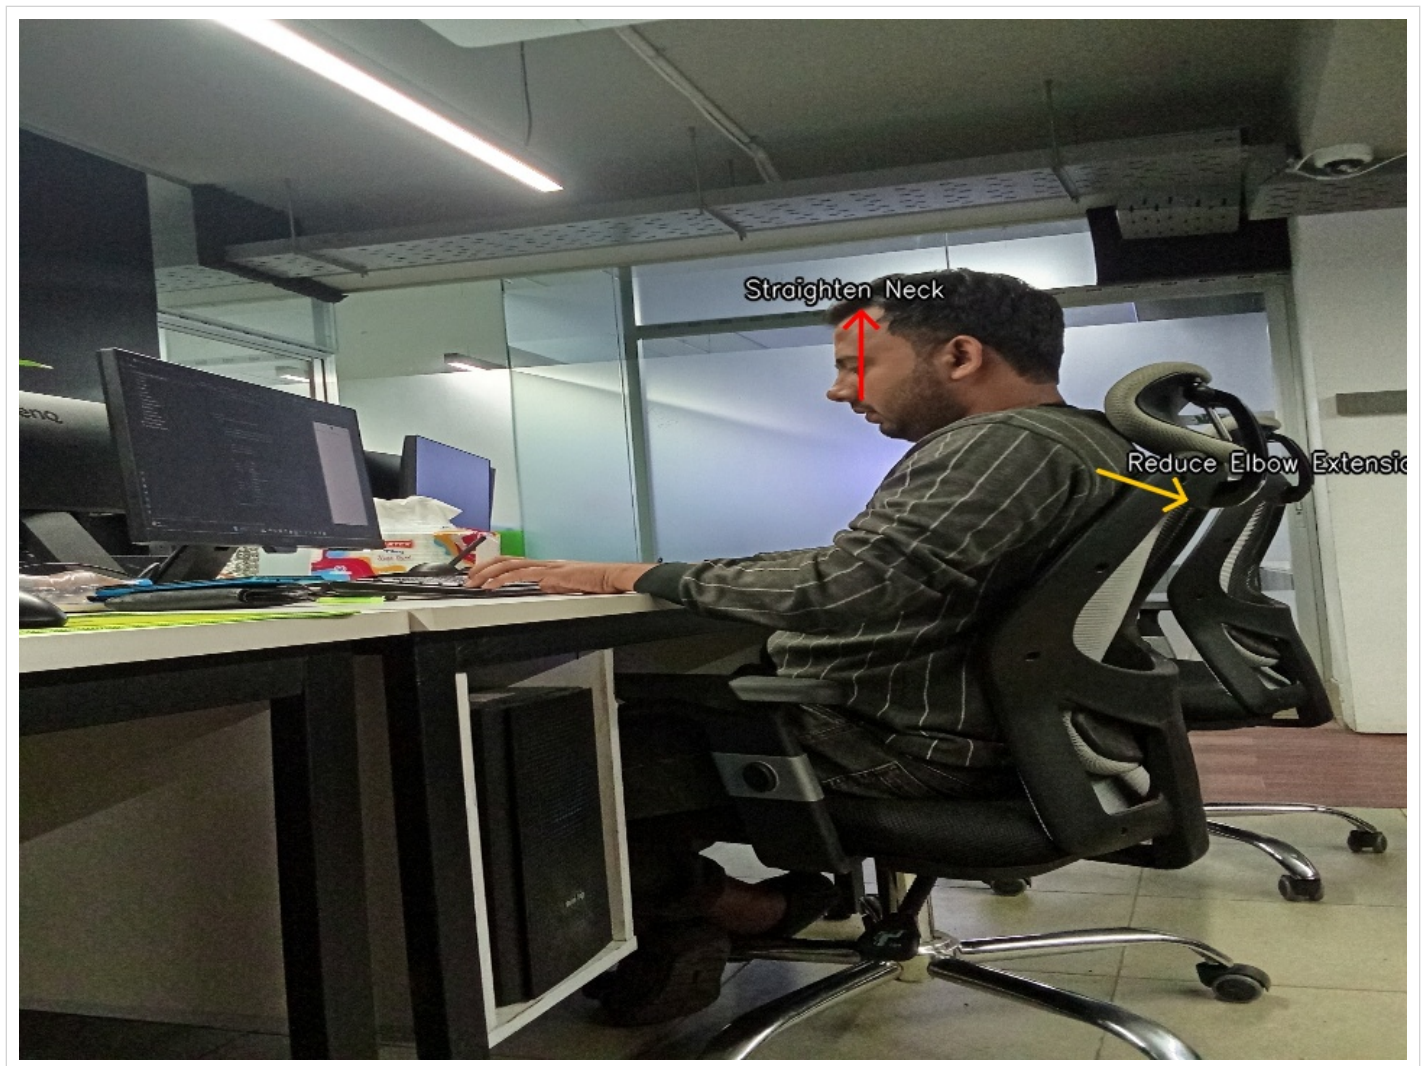

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 18 cm: Elevate your monitor so the top edge is at or just below eye level, reducing neck flexion from 65° to under 20° as per ISO 9241-5.
- Bend elbows to 90-100 degrees: Adjust chair and desk so elbows are bent between 90-100°, not 155°, to reduce strain on wrists and shoulders.
- Reduce wrist deviation to under 5 degrees: Position keyboard and mouse so wrists remain straight, minimizing deviation from current 12° to less than 5°.
- Adjust pelvis to neutral (0-10° tilt): Sit back fully in chair with lumbar support to decrease pelvic tilt from 63° to under 10°, supporting lower back.
- Raise chair seat to 46 cm: Increase chair height so forearms are parallel to desk and elbows are at 90-100°, supporting proper upper limb posture.
- Move keyboard 8 cm closer: Bring keyboard closer to reduce arm extension and wrist deviation, supporting neutral wrist and elbow angles.

Final Advice

Your reported pain levels and posture risks are severe. Please consult a healthcare professional immediately for assessment of possible nerve involvement (tingling, high pain). Avoid further strain until cleared by a medical provider.
