

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

### Workstation Analysis

---

- Chair: SeatDepth: Green

### Pain & Risk Summary

---

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

### Posture & Ergonomic Corrections

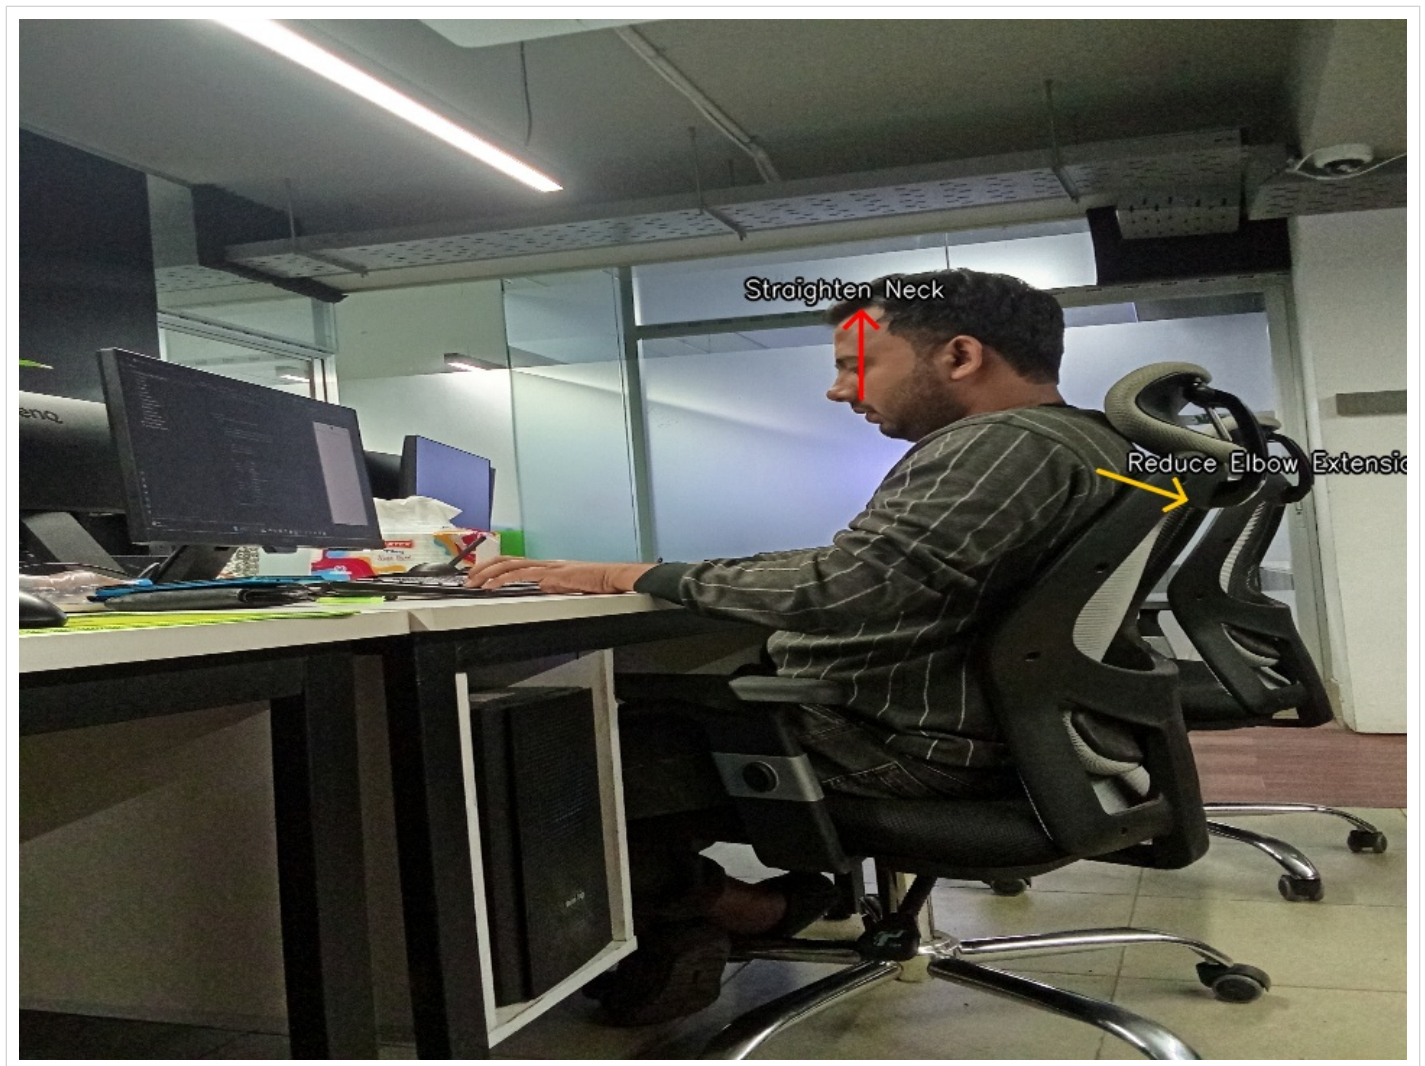

---

- Raise monitor by 18 cm: Increase monitor height by 18 cm so the top edge is at or just below eye level. This will reduce neck flexion from 65° to the ISO-recommended 0–20° range.
- Bend elbows to 90–100 degrees: Adjust chair and desk height so elbows are bent at 90–100°, not 155°, keeping forearms parallel to the floor and close to the body.
- Reduce pelvic tilt to under 15 degrees: Sit with hips and pelvis upright, using lumbar support if needed, to decrease pelvic tilt from 63° to below 15° as per ISO 9241-5.
- Keep wrists straight, deviation under 5 degrees: Position keyboard and mouse so wrists remain straight, with less than 5° deviation, to minimize strain and nerve compression.
- Raise chair seat to 46 cm: Adjust chair seat height to 46 cm so feet are flat on the floor and knees are at 90°, supporting a neutral pelvis and reducing lower back strain.
- Move keyboard 8 cm closer: Bring keyboard 8 cm closer to the edge of the desk to allow elbows to stay at 90–100°, reducing shoulder and wrist strain.

### Final Advice

---

Your pain intensity and posture risks are severe. Please consult a healthcare provider immediately for assessment of possible nerve or musculoskeletal injury. Ergonomic changes are urgent, but do not delay medical evaluation. Safety note: Always consult your physician before starting any new exercise or stretching routine.
