

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 10 cm: Elevate your monitor so the top edge is at or just below eye level. This reduces neck flexion from 30° to under 10°, aligning with ISO 9241-5 and minimizing neck strain.
- Lower shoulders by 5 cm: Relax your shoulders and adjust armrests or chair height so your shoulders are not elevated. This reduces unnecessary muscle tension and aligns with ISO 9241-5 recommendations.
- Bend elbows to 100 degrees: Adjust chair and desk height so your elbows are bent at approximately 100°, not extended. This reduces strain on arms and shoulders, as per ISO 9241-5.
- Straighten wrists to neutral position: Keep wrists straight, not bent sideways or upwards. Adjust keyboard and mouse placement to maintain a neutral wrist angle, reducing risk of carpal tunnel.
- Sit with pelvis upright at 0 degrees: Adjust your sitting posture so your pelvis is upright, not tilted forward or backward. Use lumbar support if needed to maintain this position.
- Raise chair seat to 46 cm: Increase chair height so your elbows are at desk level and feet remain flat on the floor, supporting a neutral elbow and shoulder posture.
- Move keyboard 8 cm closer: Place your keyboard closer to the edge of the desk to avoid overreaching and maintain proper elbow and wrist alignment.
- Add lumbar support cushion 5 cm thick: Place a 5 cm thick lumbar cushion at your lower back to support upright pelvic posture and reduce lower back strain.

Final Advice

Your reported pain levels and posture risks are severe. Please consult a healthcare professional immediately for a medical evaluation before making workstation changes. Safety note: Always consult your physician before

starting any new exercise or stretching routine, especially with high pain or neurological symptoms.
