

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 5

Main Pain Region(s): Elbows/Forearms (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your sitting position so your elbows are bent between 90° and 110°, keeping your forearms parallel to the floor and close to your body. Avoid extending your arms outward or locking your elbows.
- Reduce Neck Flexion: Sit upright with your head balanced directly over your shoulders. Raise your screen so you look straight ahead, minimizing the need to tilt your neck forward.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms while typing or using your mouse. Avoid bending your wrists up, down, or to the sides.
- Maintain Neutral Pelvis: Sit with your hips level and your pelvis in a neutral position, avoiding excessive forward or backward tilt. Use a chair with good lumbar support.
- Raise Laptop Screen: Use a laptop stand or stack books to elevate your laptop screen to eye level, reducing neck flexion and upper back strain.
- External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your elbows are at a 90°–110° angle and your wrists remain straight.
- Adjust Chair Height: Set your chair height so your feet are flat on the floor and your thighs are parallel to the ground. This helps maintain a neutral pelvis and reduces lower back strain.

Final Advice

Your current workstation setup and posture present high ergonomic risks, especially for your neck, wrists, and upper back. Immediate adjustments to your elbow angle, wrist position, and screen height are critical. Incorporate the recommended exercises and consider the suggested equipment to reduce discomfort and

prevent further strain.
