

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

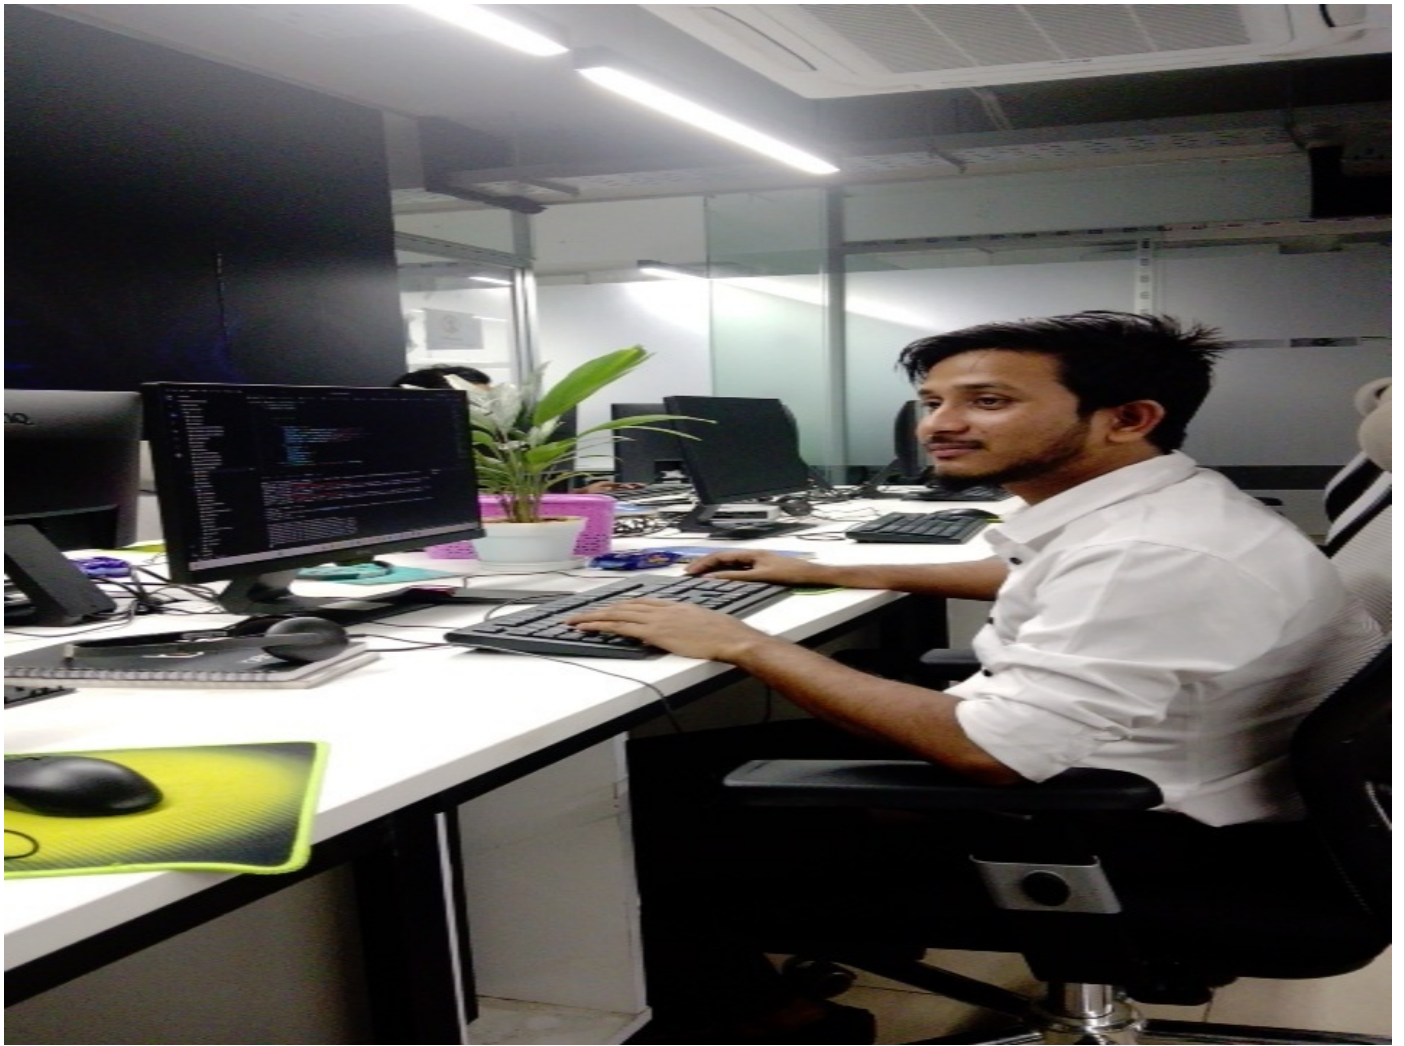

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright and adjust your screen so your head remains level, minimizing the need to bend your neck forward. Aim to keep your neck flexion below 10° as recommended by ISO 9241-5.
- Correct Elbow Angle: Position your elbows so they are bent at approximately 90–100°, close to your body. Avoid extending your arms forward or outward excessively while typing or using your mouse.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms while typing or using your mouse. Avoid bending your wrists up, down, or sideways.
- Align Pelvis and Lower Back: Sit with your pelvis in a neutral position, using the backrest to support your lower back. Avoid slouching or tilting your pelvis forward excessively.
- Raise Monitor Height: Elevate your laptop screen using a monitor riser or stack of sturdy books so the top of the screen is at or just below eye level. This reduces neck flexion and upper back strain.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your elbows remain at a 90–100° angle and your wrists stay straight.
- Adjust Chair Height and Support: Set your chair height so your feet are flat on the floor and your thighs are parallel to the ground. Use a lumbar support cushion to maintain a neutral pelvic tilt.

Final Advice

Your current setup places you at high ergonomic risk for neck, upper back, and wrist discomfort. Prioritize raising your screen, using external input devices, and supporting your lower back. Perform the recommended exercises regularly and consider the suggested equipment for significant improvement. If symptoms persist or worsen,

consult a healthcare professional.
