

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor and look straight ahead.
- Correct Elbow Angle: Adjust your sitting position so your elbows are bent at approximately 90–110°. Keep your forearms parallel to the floor and close to your body.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Upright Pelvic Alignment: Sit with your pelvis in a neutral position—avoid slouching or tilting your pelvis forward. Your hips should be level and your lower back supported.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will reduce the need to flex your neck downward.
- Adjust Chair Height and Armrests: Set your chair height so your elbows are at desk level and your forearms rest comfortably. Adjust armrests (if available) to support your arms without lifting your shoulders.
- Add Lumbar Support: Use a lumbar cushion or adjust your chair's lumbar support to maintain the natural curve of your lower back and reduce pelvic tilt.

Final Advice

Your current posture and workstation setup present high ergonomic risks, especially for your neck, upper back, and lower back. Immediate adjustments to monitor height, lumbar support, and elbow positioning are essential.

Perform the recommended exercises regularly, and consider the suggested equipment for significant improvement. If pain persists or worsens, consult a healthcare professional.
