

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, look straight ahead to keep your neck in a neutral position.
- Neutral Wrist Alignment: Keep your wrists straight and level with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Optimize Elbow Angle: Adjust your chair or desk height so your elbows are bent at approximately 90–100 degrees, keeping your forearms parallel to the floor.
- Raise Monitor Height: Elevate your laptop screen or use an external monitor so the top of the screen is at or just below eye level. This will reduce the need to bend your neck forward.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows stay close to your body.

Final Advice

Your posture and workstation setup are contributing to significant upper back and wrist discomfort. Prioritize correcting neck flexion and wrist deviation by adjusting your monitor height and using external input devices. Perform the recommended exercises regularly, and take breaks every 30–45 minutes. If pain or tingling persists or worsens, consult a healthcare professional. Safety note: Perform all exercises gently and stop immediately if you experience pain.
