

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and look straight ahead.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing. Avoid bending your wrists upwards or sideways.
- Optimize Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100 degrees, close to your body, and relaxed.
- Raise Monitor Height: Elevate your laptop screen or use an external monitor so the top of the screen is at or just below eye level. This will reduce the need to bend your neck forward.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Position them so your wrists remain straight and your elbows are close to your body.

Final Advice

Your upper back pain is severe and your workstation setup is contributing to neck and wrist strain. Prioritize raising your screen and using external input devices. Perform the recommended exercises regularly, and consider consulting a healthcare professional if pain persists or worsens. Safety note: Stop any exercise if you feel sharp pain, dizziness, or numbness, and seek medical advice.
