

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

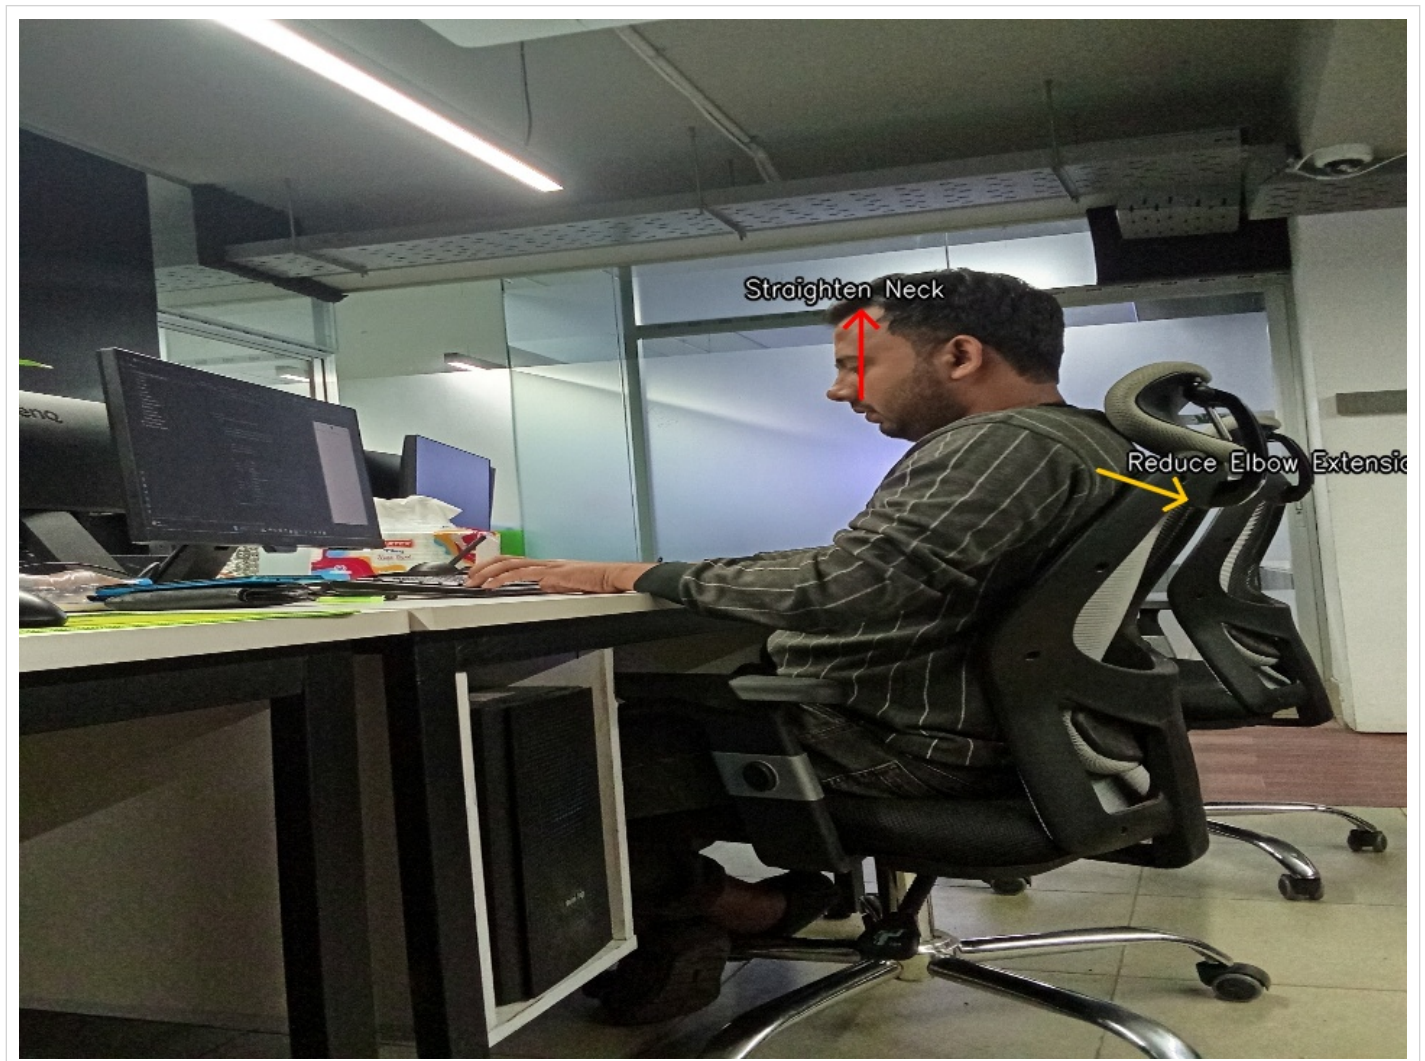

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and your gaze straight ahead.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°, close to your body. Avoid extending your arms forward or outward excessively.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or sideways.
- Pelvic Alignment: Sit with your hips fully back in the chair and your pelvis neutral. Avoid slouching or tilting your pelvis forward.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will help reduce excessive neck flexion.
- Adjust Desk and Chair Height: Ensure your chair and desk allow your elbows to rest at a 90–100° angle, with your forearms parallel to the floor.
- Optimize Keyboard and Mouse Placement: Position your keyboard and mouse close to your body and at the same height as your elbows to minimize wrist deviation and arm extension.
- Support Pelvis and Lower Back: Use a chair with proper lumbar support to maintain a neutral pelvic tilt and reduce strain on your lower back.

Final Advice

Your assessment shows severe ergonomic risks, especially for your neck, upper back, and lower back.

Immediate workstation adjustments and posture corrections are strongly recommended. If pain persists or worsens, consult a healthcare professional.
