

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

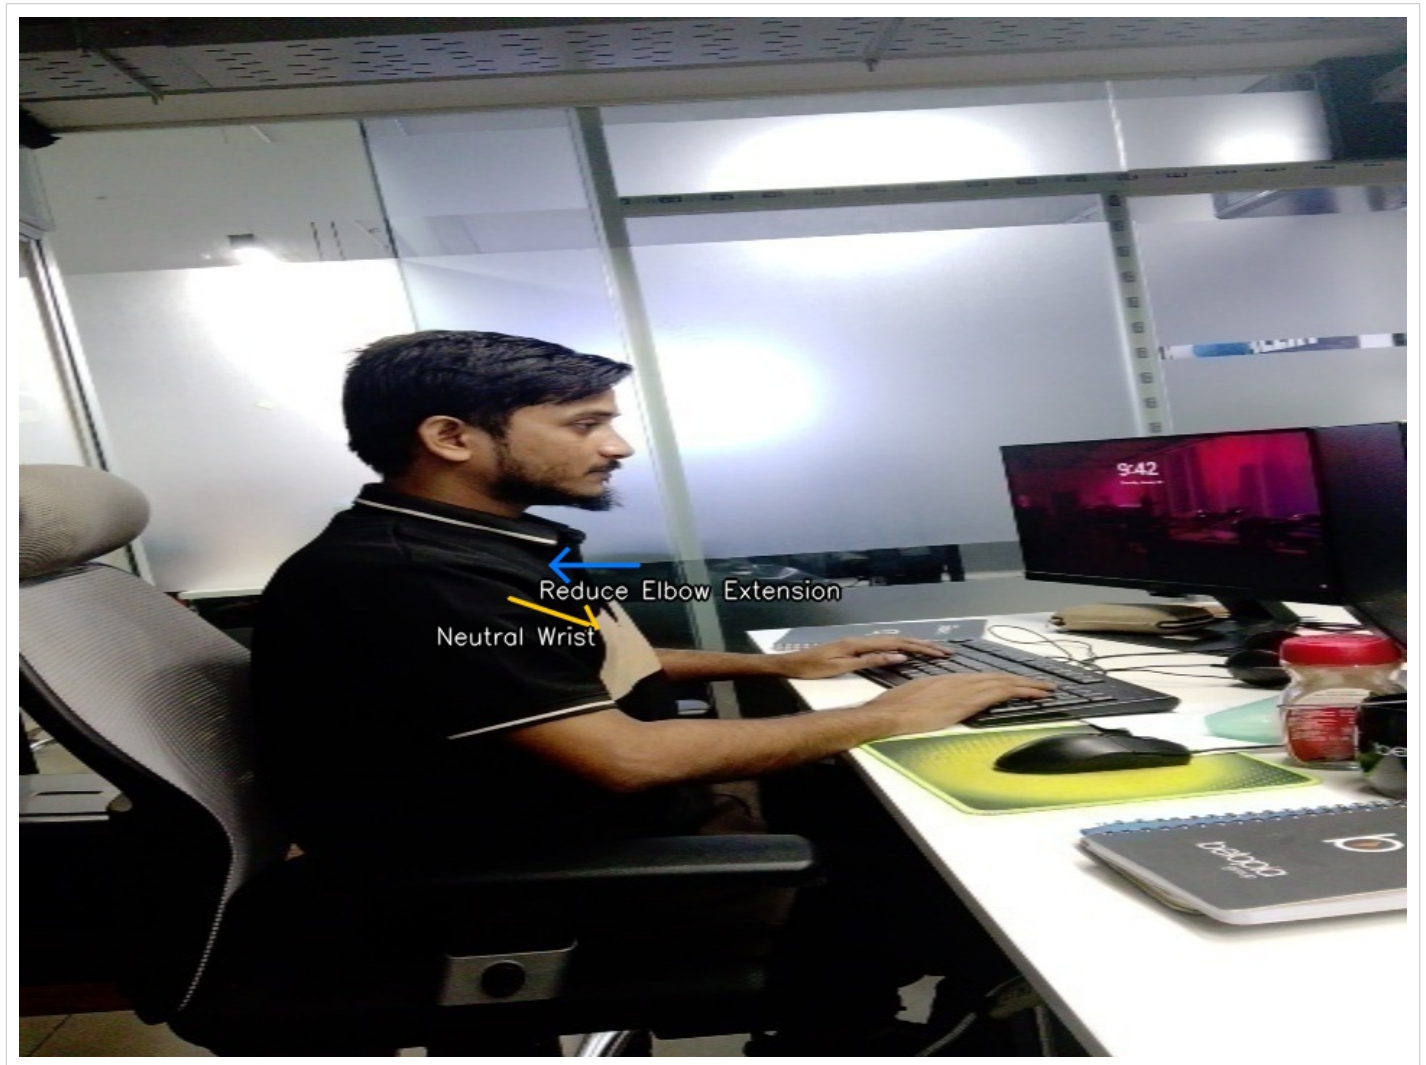

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your chair and desk height so your elbows are bent at 90–100°, with forearms parallel to the floor and wrists straight. Avoid extending elbows beyond 100° to reduce strain.
- Neutral Wrist Position: Keep wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending wrists up, down, or sideways to minimize compression and nerve irritation.
- Reduce Pelvic Tilt: Sit with your hips and knees at approximately 90°, feet flat on the floor or on a footrest. Use lumbar support to maintain the natural curve of your lower back and prevent excessive forward tilt.
- Lower Shoulder Elevation: Relax your shoulders and ensure your armrests are at a height that supports your forearms without lifting your shoulders. Keep shoulders down and away from your ears.
- Minimize Neck Flexion: Raise your monitor so the top of the screen is at or just below eye level. Keep your head upright and avoid looking down for prolonged periods.
- Raise Monitor Height: Use a monitor riser or stack sturdy books to elevate your monitor by approximately 8–12 cm, so the top edge is at or slightly below eye level. This will reduce neck flexion and upper back strain.
- Adjust Chair and Desk Height: Set your chair height so your feet are flat on the floor and your thighs are parallel to the ground. Adjust your desk or keyboard tray so your elbows are at a 90–100° angle.
- Add Lumbar Support: Place a lumbar cushion or rolled towel at your lower back to maintain the natural lumbar curve and reduce pelvic tilt.
- Optimize Armrest Height: Adjust armrests so they just support your forearms without pushing your shoulders

up. If your chair lacks armrests, consider adding adjustable ones.

Final Advice

Your workstation setup is causing significant strain, especially in your upper back, neck, and wrists. Address monitor height and posture urgently. If pain persists or worsens, consult a healthcare professional.
