Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Posture & Ergonomic Corrections

- Correct Pelvic Tilt: Sit with your hips fully back in the chair and ensure your pelvis is neutral, not tilted forward or backward. Use the chair's backrest to support your lower back and keep your feet flat on the floor.
- Reduce Shoulder Elevation: Relax your shoulders and keep them level, avoiding any upward shrugging. Adjust your armrests or chair height so your shoulders remain relaxed while typing or using the mouse.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Raise Monitor Height: Adjust your monitor so the top edge is at or just below eye level. Use a monitor riser or stack stable objects under the monitor to achieve this height.
- Optimize Chair Support: Ensure your chair provides adequate lumbar support. Adjust the backrest or add a lumbar cushion to maintain the natural curve of your lower back.

Final Advice

Your workstation setup is causing significant upper back and shoulder discomfort, with high pelvic tilt and monitor height violations. Prioritize raising your monitor and improving lumbar support. Perform recommended exercises regularly and consider equipment upgrades for lasting relief. If pain persists or worsens, consult a healthcare professional.
