

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Neck, Lower Back (VAS 8)

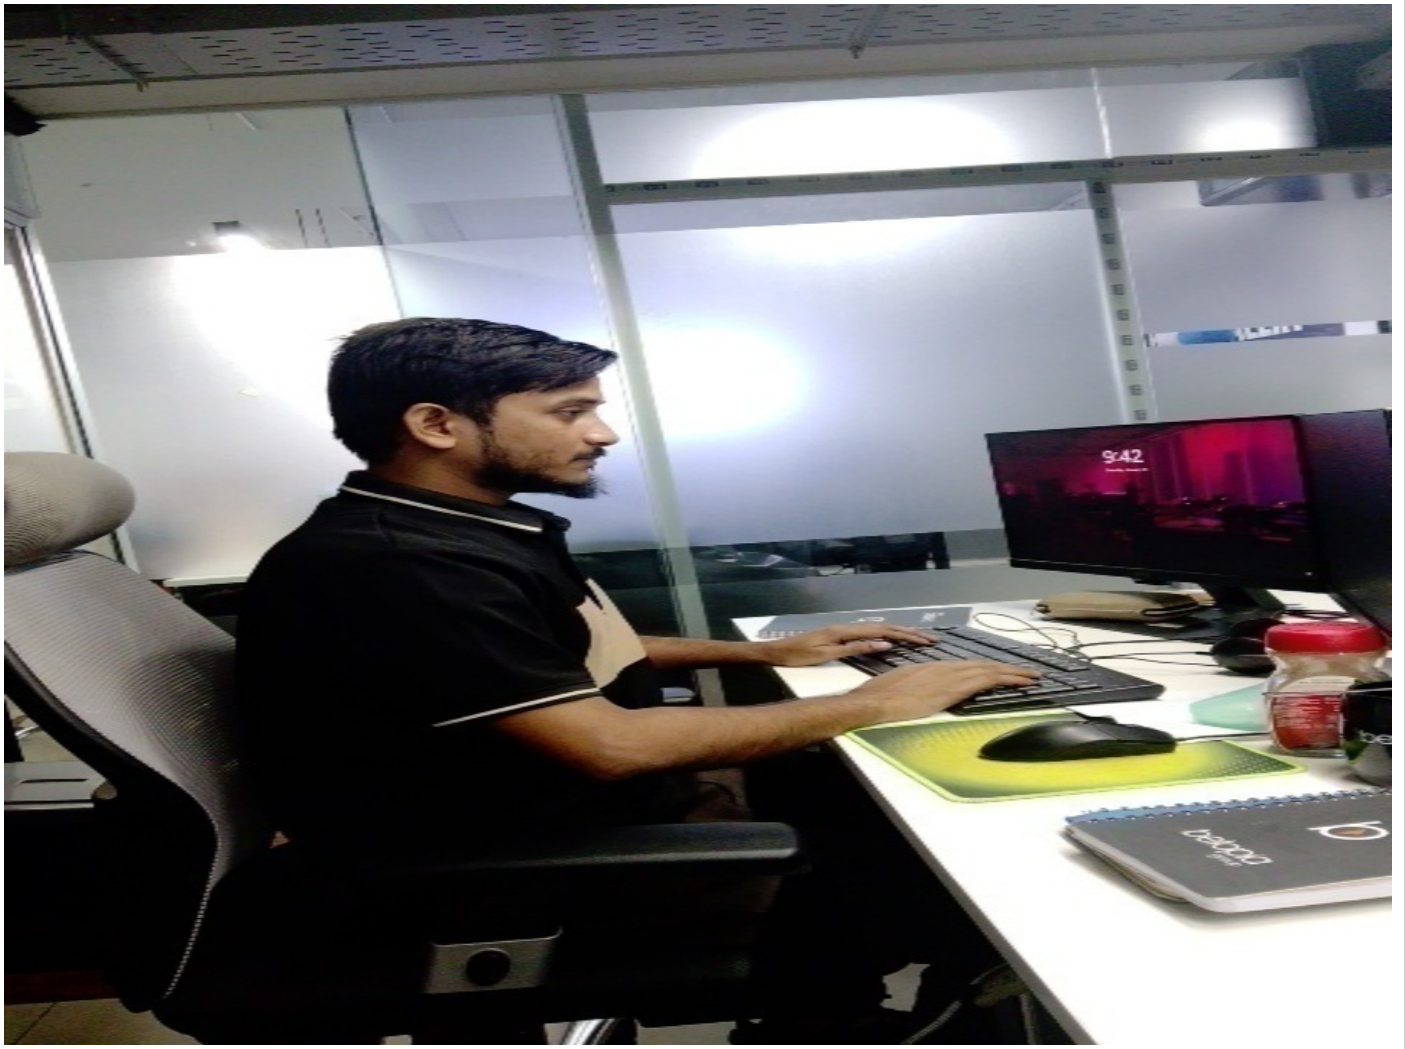

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Correct Pelvic Tilt: Sit with your hips fully back in the chair and ensure your pelvis is neutral (not tilted forward or backward). Your thighs should be parallel to the floor, and both feet flat on the ground or on a footrest.
- Reduce Shoulder Elevation: Relax your shoulders and keep them level, not hunched or raised. Adjust your chair height or armrests so your shoulders can remain relaxed while typing.
- Optimize Elbow Angle: Position your elbows at a 90–100° angle, close to your body. Adjust your chair or keyboard height to achieve this neutral position.
- Minimize Wrist Deviation: Keep wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending wrists up, down, or sideways.
- Raise Monitor Height: Adjust your monitor so the top of the screen is at or just below eye level. Use a monitor riser or stack stable objects under the monitor if needed.

Final Advice

Your workstation setup and posture are contributing to significant upper back and neck pain. Address pelvic tilt and monitor height urgently. Incorporate recommended exercises and equipment changes to reduce discomfort and prevent further strain. If pain persists or worsens, consult a healthcare professional.
