

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced directly over your shoulders. Avoid bending your neck forward; instead, keep your chin parallel to the floor and your gaze straight ahead.
- Correct Wrist Position: Keep your wrists in a neutral, straight position while typing or using the mouse. Avoid bending your wrists upwards or sideways.
- Optimize Elbow Angle: Adjust your chair or desk height so your elbows are bent at approximately 90–100°, with forearms parallel to the floor and close to your body.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will reduce the need to flex your neck forward.
- Adjust Keyboard and Mouse Position: Position your keyboard and mouse at elbow height and close enough so your wrists remain straight and your elbows stay near your sides.

Final Advice

Your posture and workstation setup are contributing to neck, upper back, and wrist strain, with high pain intensity reported in the upper back and shoulders. Immediate improvements to monitor height and wrist alignment are critical. Begin recommended exercises and consider equipment upgrades to reduce strain. If pain persists or worsens, consult a healthcare professional.
