

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Neck, Lower Back (VAS 8)

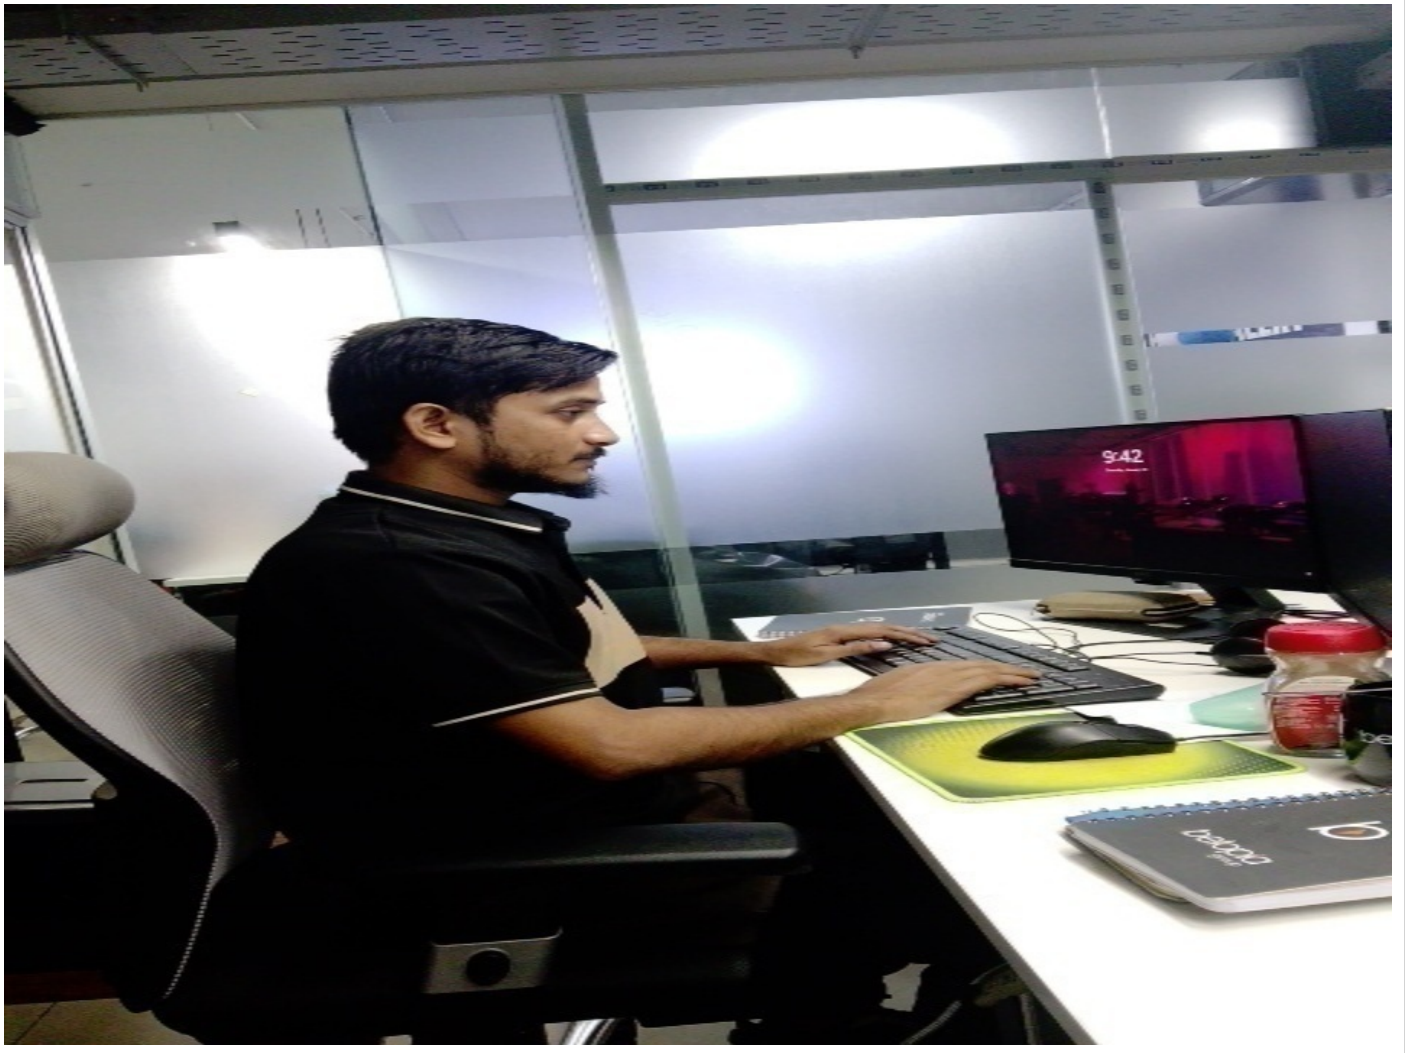

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Correct Pelvic Tilt: Sit with your hips fully back in the chair and ensure your pelvis is neutral, not tilted forward or backward. Keep both feet flat on the floor and your knees at or slightly below hip level.
- Reduce Shoulder Elevation: Relax your shoulders and let your arms hang naturally at your sides. Adjust your chair or armrests so your shoulders are not raised while typing or using the mouse.
- Neutral Wrist Position: Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Raise Monitor Height: Adjust your monitor so the top of the screen is at or just below your eye level. Use a monitor riser or stack stable objects under the monitor until it reaches the correct height.
- Adjust Chair Height and Support: Set your chair height so your elbows are at a 90–100° angle when typing, and use a lumbar support cushion to maintain a neutral pelvic position.

Final Advice

Your workstation setup is causing significant upper back and neck strain, with high risk due to poor pelvic tilt and monitor height. Immediate ergonomic adjustments and regular exercises are strongly recommended. If pain persists or worsens, consult a healthcare professional.
