

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Lower Back (VAS 8)

Future Risk: Medium – Risk of progression if unaddressed

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your chair and keyboard position so your elbows are bent at 90–100°, with forearms parallel to the floor. Avoid extending elbows beyond this range to reduce strain.
- Neutral Wrist Alignment: Keep wrists straight and in line with your forearms while typing or using the mouse. Avoid bending wrists upwards or sideways to minimize nerve compression.
- Reduce Pelvic Tilt: Sit with your hips fully back in the chair, feet flat on the floor, and use lumbar support to maintain a slight natural curve in your lower back. Avoid slouching or excessive forward tilt.
- Lower Shoulder Elevation: Relax your shoulders and ensure your armrests (if present) are adjusted so your shoulders are not lifted or tensed while working.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will help maintain a neutral neck posture and reduce upper back and neck strain.
- Optimize Keyboard and Mouse Position: Position your keyboard and mouse close to your body and at elbow height to prevent overreaching and maintain proper elbow and wrist angles.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back, lower back, wrists, and elbows. Immediate workstation adjustments and posture corrections are strongly recommended. If pain persists or worsens, consult a healthcare professional.
