

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Neck, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Pelvic Tilt: Sit with your hips fully back in the chair, ensuring your pelvis is neutral (not tilted forward or backward). Use the chair's backrest for full lumbar support to maintain a natural curve in your lower back.
- Reduce Shoulder Elevation: Relax your shoulders and keep them level, not hunched or raised. Adjust your chair height so your forearms are parallel to the floor and your shoulders remain relaxed while typing.
- Align Elbow Angle: Position your elbows at a 90–100° angle, close to your body. Adjust armrests or chair height so your forearms rest comfortably without reaching up or out.
- Minimize Wrist Deviation: Keep wrists straight and in line with your forearms while typing or using the mouse. Avoid bending wrists up, down, or sideways.
- Raise Monitor Height: Adjust your monitor so the top of the screen is at or just below eye level. Use a monitor riser or stack stable objects under the monitor to achieve this height.
- Optimize Chair Support: Ensure your chair provides adequate lumbar support. Adjust the backrest or add a lumbar cushion to maintain the natural curve of your lower back.

Final Advice

Your assessment indicates significant ergonomic risks, especially for your upper back and neck due to severe pelvic tilt and monitor height violations. Address workstation setup and posture urgently to reduce pain and prevent further strain. If pain persists or worsens, consult a healthcare professional.
