Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Yellow
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 6

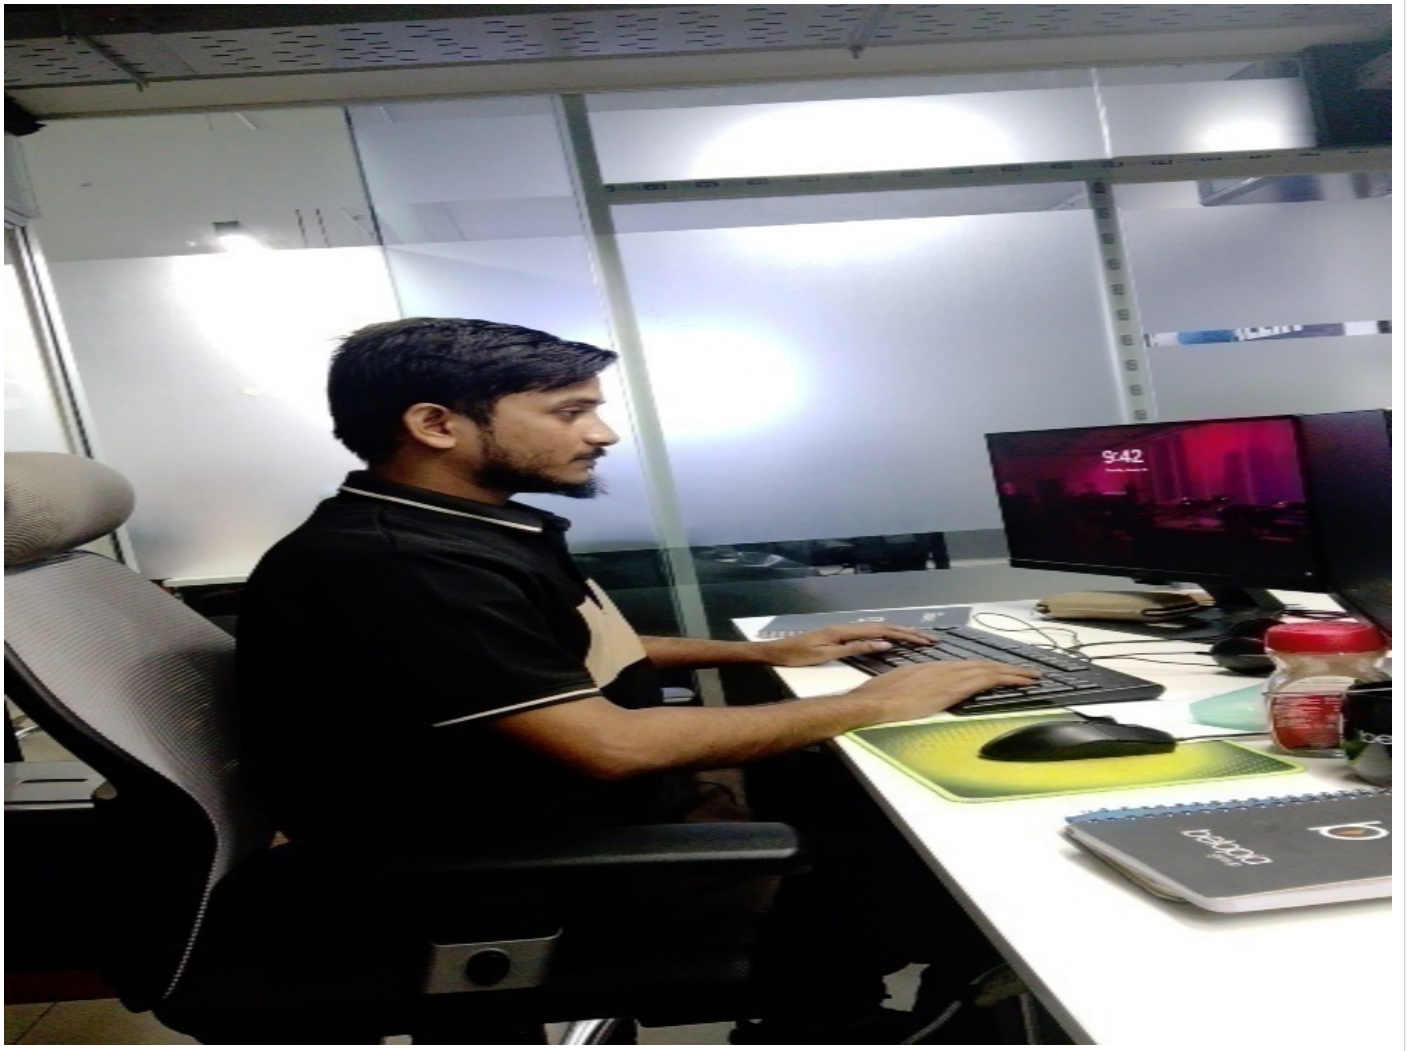

Main Pain Region(s): Neck, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Pelvic Tilt: Sit with your hips fully back in the chair and ensure your pelvis is in a neutral position. Avoid slouching or tilting your pelvis forward. Use the chair's backrest for support.
- Reduce Shoulder Elevation: Relax your shoulders and keep them level, not hunched or raised. Adjust your armrests so your shoulders can remain relaxed while typing.
- Neutral Wrist Alignment: Keep your wrists straight and in line with your forearms when typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Raise Monitor Height: Adjust your monitor so the top edge is at or just below eye level. This will help you maintain a neutral neck posture and reduce strain.
- Adjust Chair for Pelvic Support: Ensure your chair provides adequate lumbar and pelvic support. Adjust the backrest and seat pan so your hips are level and your lower back is supported.

Final Advice

Your workstation setup is causing significant strain, especially to your upper back and shoulders. Immediate correction of monitor height and pelvic posture is critical. Implement the recommended exercises and equipment changes, and consider consulting a healthcare professional if pain persists or worsens.
