

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright and adjust your head position so your chin is parallel to the floor. Avoid bending your neck forward; keep your ears aligned with your shoulders.
- Neutral Wrist Alignment: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists upwards or sideways.
- Optimize Elbow Angle: Adjust your chair or desk height so your elbows are bent at approximately 90–100°, with your forearms parallel to the floor and close to your body.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will help reduce neck flexion and prevent forward head posture.
- Keyboard and Mouse Positioning: Place your keyboard and mouse at elbow height and close enough to avoid reaching. Ensure your wrists remain straight while typing or using the mouse.

Final Advice

Your main ergonomic risks are high wrist strain and significant neck flexion, both of which violate ISO 9241-5 recommendations for neutral joint posture. Prioritize correcting monitor height and wrist position, and consider ergonomic equipment to reduce pain and prevent further strain. Perform the recommended exercises regularly and monitor your symptoms; if pain persists or worsens, consult a healthcare professional.
