

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; keep your chin parallel to the floor. Adjust your monitor so you can look straight ahead without tilting your head.
- Neutral Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists upwards or sideways.
- Optimize Elbow Angle: Position your elbows at a 90–100° angle, close to your body. Adjust your chair height or armrests so your forearms are parallel to the floor.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will reduce neck flexion and help maintain a neutral head position.
- Adjust Keyboard and Mouse Placement: Place your keyboard and mouse at elbow height and close to your body to minimize wrist deviation and elbow overextension.

Final Advice

Your assessment shows significant ergonomic risks, especially for your neck, upper back, and wrists. Address workstation setup and posture immediately to reduce pain and prevent further issues. If pain persists or worsens, consult a healthcare professional.
