

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head balanced directly over your shoulders. Adjust your gaze so your chin is parallel to the floor and avoid tilting your head forward. This reduces neck strain and aligns with ISO 9241-5 recommendations for neutral neck posture.
- Correct Wrist Position: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists upwards or sideways to minimize strain and comply with ISO 9241-5, which requires neutral wrist alignment.
- Optimize Elbow Angle: Adjust your chair or desk height so your elbows are bent at approximately 90–100°, close to your body. This reduces muscle fatigue and follows ISO 9241-5 guidance for relaxed upper limb posture.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This will help reduce neck flexion and prevent forward head posture, as required by ISO 9241-5.
- Adjust Keyboard and Mouse Placement: Position your keyboard and mouse so they are at elbow height and close enough to avoid reaching. This supports neutral wrist and elbow posture, reducing strain and complying with ISO 9241-5.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back, neck, and wrists. Prioritize correcting neck flexion and wrist deviation, and consider high-priority equipment upgrades. If pain persists or worsens, consult a healthcare professional.
