

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

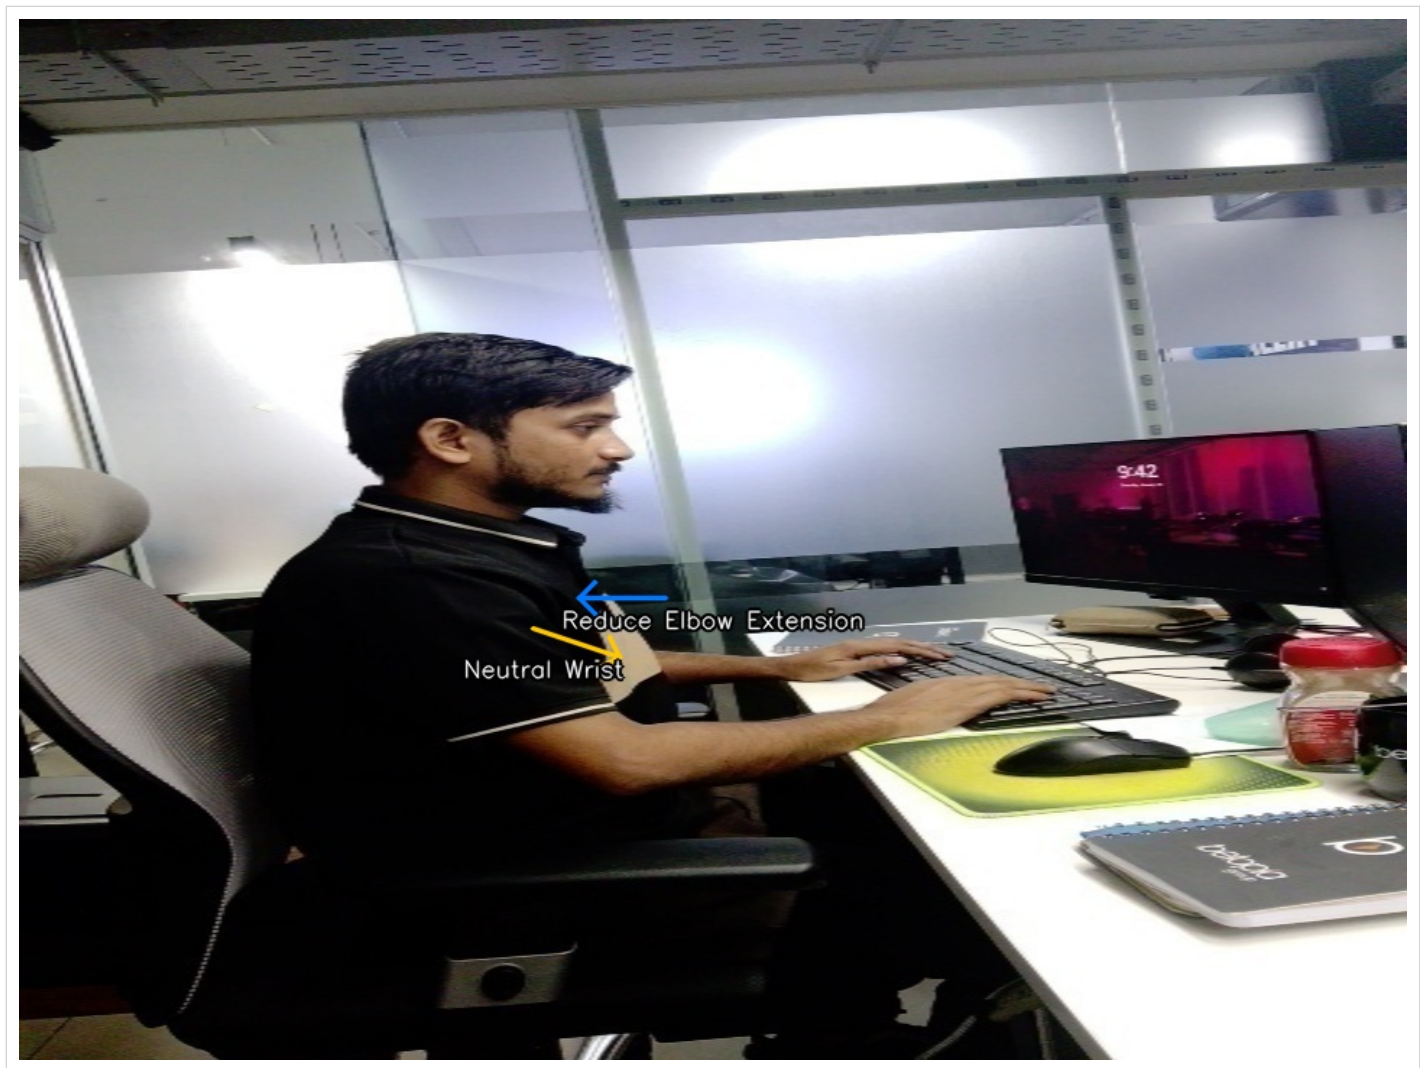

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your chair and desk height so your elbows are bent at 90–100°, with forearms parallel to the floor and wrists straight. Avoid extending elbows beyond this range to reduce strain.
- Neutral Wrist Position: Keep wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending wrists up, down, or sideways to minimize nerve compression.
- Reduce Pelvic Tilt: Sit fully back in your chair with your pelvis neutral (not tilted forward or backward). Use lumbar support to maintain the natural curve of your lower back.
- Lower Shoulder Elevation: Relax your shoulders and ensure your armrests are at a height that allows your shoulders to remain down and relaxed, not hunched.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This reduces neck flexion and upper back strain.
- Adjust Chair and Desk Height: Set your chair and desk so your elbows are at 90–100° and your wrists remain neutral while typing. Use a footrest if your feet do not rest flat on the floor.

Final Advice

Your assessment shows high ergonomic risk, especially for upper back and wrist pain. Prioritize monitor height, elbow/wrist posture, and lumbar support. Implement corrections and exercises daily. If pain or tingling worsens, consult a healthcare provider.
